# INFO TECH sp.j.

---

- ❑ Experts in the field of communication solutions for power automation and industrial automation.
- ❑ Renowned supplier of protocol software libraries and tools for communication testing and device simulation.
- ❑ As of October 2023, the licensed INFO TECH software is the basis for implementing IEC 61850 interfaces in the products of 53 companies and institutions from 15 countries of Europe, Asia and North America.
- ❑ INFO TECH offers also:
  - **Hands-on trainings** on IEC 61850 communication,
  - **Conformance testing** of the IEC 61850 interfaces,
  - **Audits and diagnostics of systems** using IEC 61850 communication.

# Product from the renowned supplier of communication software libraries and testing tools for automation systems

---

Other known products from this area:

- ❑ **IEC 61850 Software Library (source code)**
- ❑ **61850 CCC** – IEC 61850 client DLL for PC/MS Windows
- ❑ **61850 SCC** – IEC 61850 server DLL for PC/MS Windows
- ❑ **61850 SCL Runner** – simulator of IEC 61850 server devices based on their description in SCL files
- ❑ **61850 GOOSE System Viewer** – visualization and monitoring of GOOSE communication based on SCD file
- ❑ **ProTester** – simulation tools for master and slave stations of protocols operating on serial and TCP/IP based networks (DNP3, IEC-104, IEC-101, IEC-103, Modbus, SPA-bus)
- ❑ **ProtAn** – protocol analyzer for serial asynchronous communication (RS-232, RS-485)
- ❑ **ProtAn for Ethernet** – protocol analyzer for Ethernet networks

# 61850 Avenue toolset

- ❑ **61850 Avenue:** set of tool programs for testing IEC 61850 communication, developed with the use of **INFO TECH IEC61850 Software Library**
- ❑ First tool of the package - **61850 Avenue client tool:** beta version supplied to selected customers already in January 2007
- ❑ First official release: May 2007 (together with **61850 Relay Simulator**)
- ❑ **GOOSE toolset:** added in January 2008
- ❑ **Sampled Values toolset:** added in December 2011
- ❑ **File Transfer toolset:** added in February 2012
- ❑ **61850 Avenue 2.0:** released in April 2013
  - Added support of **Edition 2.0**
  - Added message logging
  - Added Process Data View
- ❑ **Update of IEC 61850 client GUI:** version **2.1** released in April 2018
- ❑ **Routable GOOSE and Routable SV** options added in September 2019
- ❑ Support of **Edition 2.1** in the release of January 2021
- ❑ **Secure client-server communication (TLS and ACSE)** added in May 2022
- ❑ Added **cyclic data polling** to Process Data View: added in February 2023

The name **61850 Avenue** was adopted to the whole toolset package.

# Awarded product

- INFO TECH IEC61850 Software Library (source code) together with the testing and simulation toolsets (61850 Avenue and 61850 SCL Runner) – was honored with a prestigious award – **Honorable Commendation of the International Power Industry Fair ENERGETAB 2017**

# Wide applicability of the toolset

---

- Suitable for:
  - testing devices and systems with IEC 61850 communication,
  - commissioning of IEC 61850 based systems,
  - development projects implementing IEC 61850 communication,
  - verification of product conformance with the IEC 61850 standard,
  - practical learning of the IEC 61850 standard.
- Truly easy to learn and apply ...
- All programs include the **context help function** invokable with **F1** key.

# 61850 Avenue

---

Your safe and easy road to learn and use the IEC 61850 standard.

Welcome!

# Installation procedure

Supported platforms:

PC running

**MS Windows**

**7, 8, 10 and 11.**

# To install the software

---

From the supplied CD: possible start in autorun mode.

Alternatively: invoke the program **start.exe** from the installation package directory

# License

---

- ❑ **Before installing the software please learn and accept the licensing terms described in the paper note attached to the CD and/or in the file **License.pdf****
- ❑ Please acknowledge the following notice concerning the USB license key:
  - The supplied license key represents the value you have purchased. Please take care of it and protect it from losing or damaging like any other object of value. Please understand that we cannot replace lost, corrupted or physically damaged keys.

# Installation steps

- ❑ After starting the installation program the following list of documents, applications and drivers will be displayed – it is possible to install only selected tool programs and omit those which will not be used.
- ❑ At first, read the license agreement.

# Third party components

---

- ❑ **HASP HL drivers** – to manage the USB license key
- ❑ **WinPcap 4.1.3** used by Relay Simulator, GOOSE toolset, SV toolset (alternatively, it is possible to use Win10Pcap or Npcap if already installed)

# IEC 61850 client tool (**61850 Avenue**)

---

# Initial view after the first start-up of 61850 Avenue client

**Servers** – window with the list of server devices to communicate with.

**Properties** – window with the list of connection parameters of the selected server (connection parameters can be saved in the configuration file).

**Main operation view** – for folders with server data models.

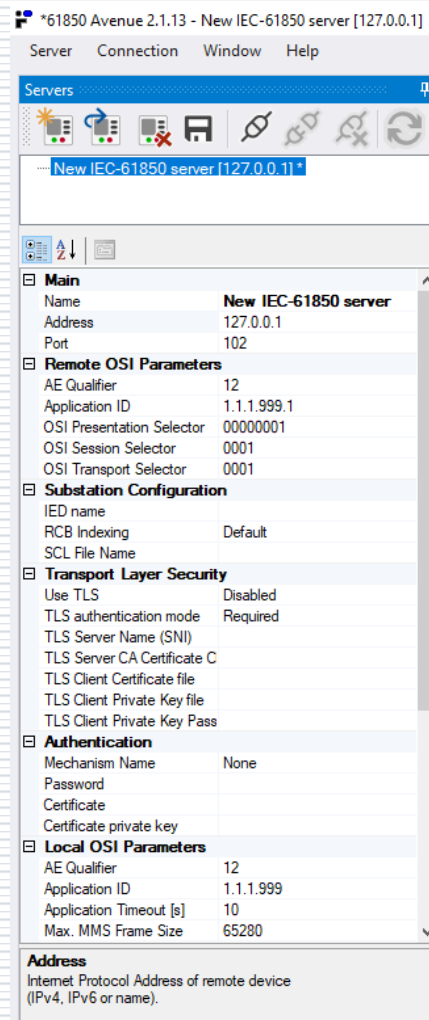

**Log view** – chronological view of operations (commands, responses and events) occurring during the interactions with server devices.

# Connection to a new server device with data model browsing

From **Server** menu select **New** command to define a new server device.

A new server IED with the name **New IEC-61850 server** and IP address **[127.0.0.1]** will appear in **Properties** window.

\* **after** the name of the IED server device means **unsaved configuration**.

# Assigning target name and IP address to a new server device for browsing

In **Servers** window write the target device name in place of default **New** **IEC-61850 server** and the target IP address in place of **127.0.0.1**.

The screenshot shows the 'Servers' window with a list of servers. The selected server is 'Tested\_Relay [127.0.0.1]'. The configuration details are as follows:

Main	
Name	Tested_Relay
Address	127.0.0.1
Port	102

Remote OSI Parameters	
AE Qualifier	12
Application ID	1.1.1.999.1
OSI Presentation Selector	00000001
OSI Session Selector	0001
OSI Transport Selector	0001

Substation Configuration	
IED name	
RCB Indexing	Default
SCL File Name	

Transport Layer Security	
Use TLS	Disabled
TLS authentication mode	Required
TLS Server Name (SNI)	
TLS Server CA Certificate C	
TLS Client Certificate file	
TLS Client Private Key file	
TLS Client Private Key Pass	

Authentication	
Mechanism Name	None
Password	

**Name**  
Name of the server for easy identification.

Now the client-server connection can be established: in **Server** window from context menu of the selected device invoke the command **Connect**

# Secure communication using TLS (encryption)

For using TLS to connect to the server, set the **Use TLS** parameter to **Enabled**. This parameter is part of the **Transport Layer Security** section of the Server Communication Profile.

Enabling TLS changes automatically communication port to default for TLS (3782). Disabling TLS returns the default port to 102. Other TLS configurable parameters:

**TLS authentication mode** – selection between **Required** authentication using TLS CA certificate or **Optional**.

**TLS Server Name (SNI)** – TLS Server Name Indication.

**TLS CA certificates files** – file with a chain of certificates used to verify the certificate of the server to which the client connects.

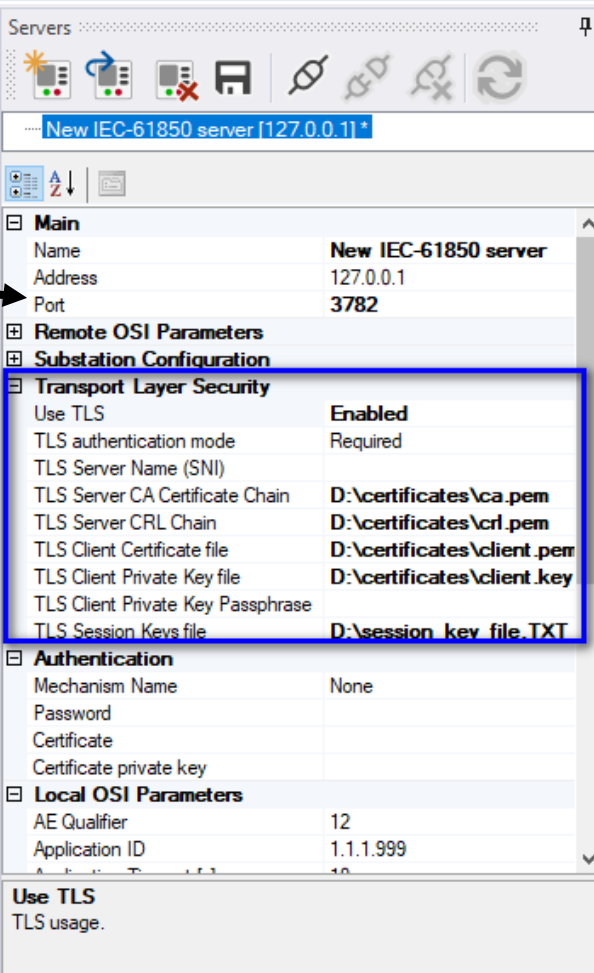

**TLS Server CRL Chain** – file with a chain of certificates used to verify the revocation status of SSL/TLS certificates.

**TLS own certificates files** – client's certificate file.

**TLS private key** – client's private key file.

**TLS private keyphrase** – the password used to decrypt the client's private key.

**TLS Session Keys file** – path to a file containing the TLS session keys.

The screenshot shows the configuration window for a 'New IEC-61850 server' with IP address 127.0.0.1. The 'Main' section shows the name 'New IEC-61850 server', address '127.0.0.1', and port '3782'. The 'Transport Layer Security' section is expanded and highlighted with a blue box, showing the following parameters:

Parameter	Value
Use TLS	Enabled
TLS authentication mode	Required
TLS Server Name (SNI)	
TLS Server CA Certificate Chain	D:\certificates\ca.pem
TLS Server CRL Chain	D:\certificates\crl.pem
TLS Client Certificate file	D:\certificates\client.pem
TLS Client Private Key file	D:\certificates\client.key
TLS Client Private Key Passphrase	
TLS Session Keys file	D:\session key file.TXT

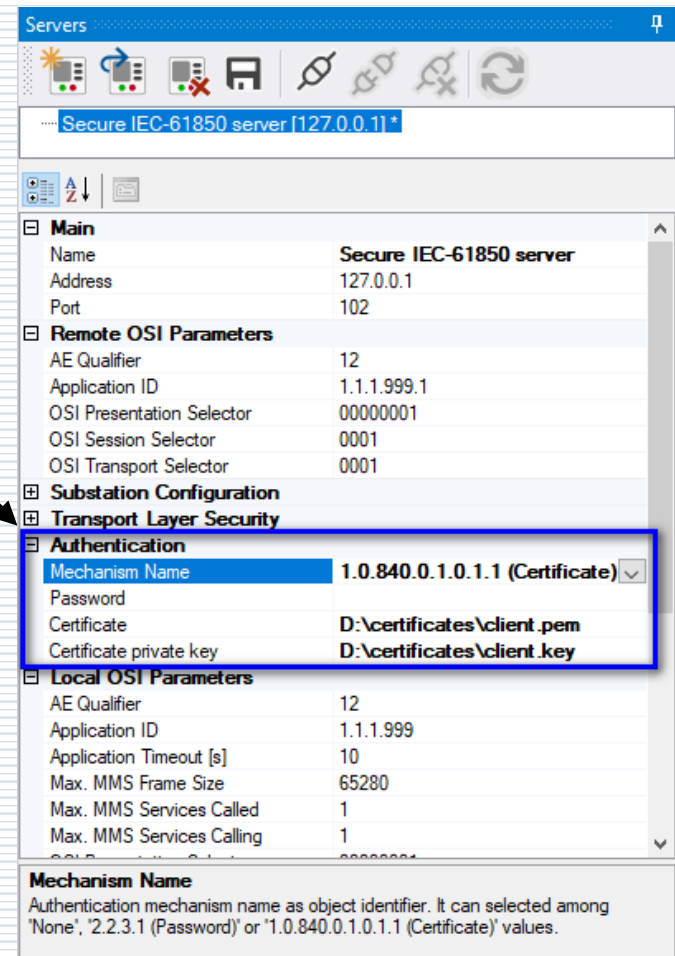

Below the 'Transport Layer Security' section, the 'Authentication' section is visible, showing 'Mechanism Name' as 'None'. The 'Local OSI Parameters' section shows 'AE Qualifier' as '12' and 'Application ID' as '1.1.1.999'. At the bottom, there is a 'Use TLS' checkbox labeled 'TLS usage'.

# Secure communication using ACSE (authentication)

Use of ACSE for authentication:

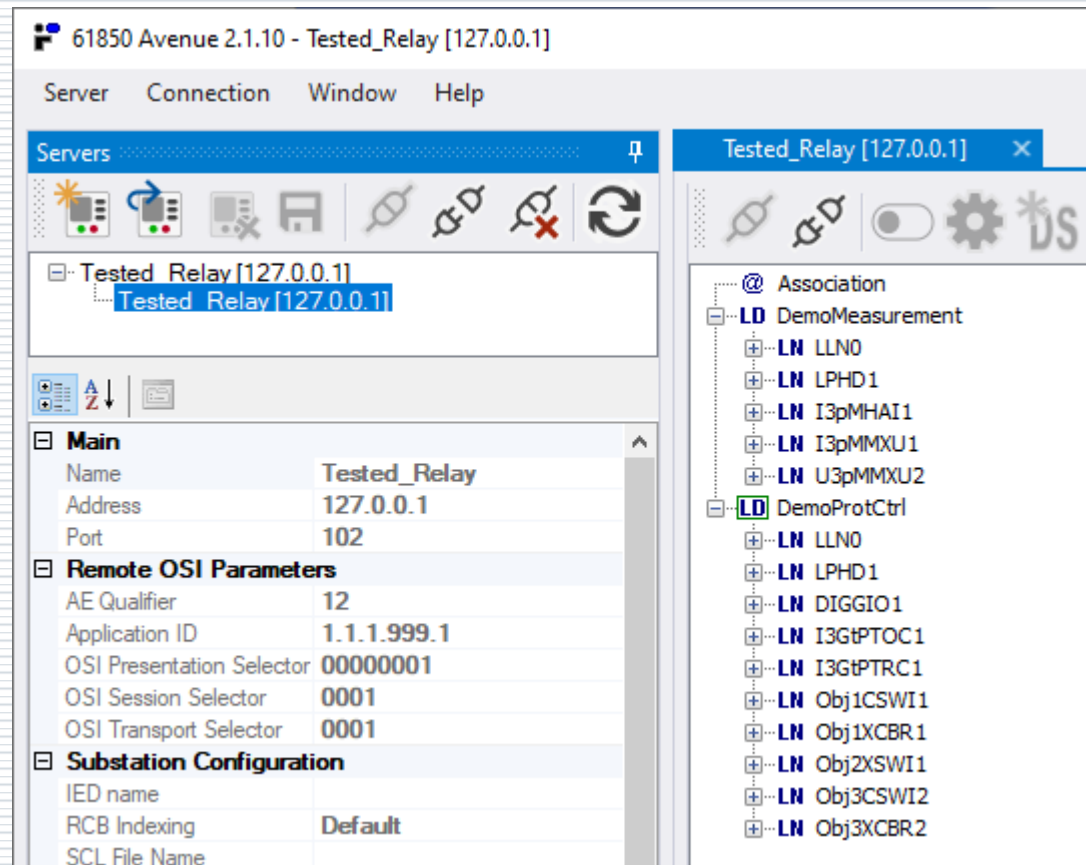

- select mechanism based on certificates\*,
- provide certificate of the client,
- provide private key of the client.

\*Integration of the IEC 62351 standard, specifically adhering to the IEC 62351-4:2018/AMD1:2020. This amendment of Part 4 presents supplementary guidance and updates designed to strengthen the security of communication within industrial automation and control systems.

# Server device data model displayed after connecting and browsing

Fast exploration of the server device data model.

# Connection to a new server device using its SCL description file

Invoke **Open** command and select an SCL file describing the server device.

After selecting the file set check boxes:

- **Show** - to display the server preview (offline mode),
- **Connect** - to automatically connect to the server.

# Explanation of Show and Connect options

After selecting the **Connect** option, the client will be automatically connected to the server.

When the **Show** option is checked, the device data model will appear in the **Main** operation view.

# Connection establishing after importing SCL file

Click **Connect** icon to connect with the device in the network

The screenshot displays the 61850 Avenue 2.1.10 - Demo [127.0.0.1] software interface. The main window shows a tree view of the device structure under 'Demo [127.0.0.1]'. The tree includes 'LD DemoMeasurement', 'LD DemoProtCtrl', and 'LN LLNO'. Under 'LN LLNO', there are several objects: 'D Mod', 'D Beh', 'D Health', 'D NamPlt', 'D Loc', 'DS DS1\_Disconnector', 'DS DS2\_Protection', 'DS DS3\_GOOSE', 'DS DS4\_GOOSE', 'BR brcb01', 'BR brcb02', 'RP urcb01', 'RP urcb02', 'GO gcb1', 'GO gcb2', 'SG SGCB', and 'LN LPHD1'. The 'Connect' icon (a magnifying glass) is highlighted in the top toolbar. An arrow points from the text 'Click **Connect** icon to connect with the device in the network' to this icon. Another arrow points from the text 'Off-line model browsing possible.' to the 'DS DS2\_Protection' object in the tree view. A third arrow points from the 'Connect' icon to a smaller inset window showing the 'Connect' button and the 'DemoProtCtrl' object.

Off-line model browsing possible.

# Refresh Current Object on LD, LN or DO/DA

Click **Refresh Current Object** on LD, LN or DO/DA level to read data with selection of **FC**.

The image consists of three screenshots from the 61850 Avenue software interface, illustrating the process of refreshing the current object.

- Top Left Screenshot:** Shows the 'Demo [127.0.0.1]' window. The 'Refresh current object' button (a circular arrow icon) is highlighted. A dropdown menu is open, showing the selection 'ST, CF, DC, EX, BR, ...'. A tooltip 'Refresh current object FC' is visible.
- Top Right Screenshot:** Shows the same window with the 'Refresh current object' button highlighted. A tooltip 'Refresh current object FC' is visible.
- Bottom Screenshot:** Shows the '61850 Avenue 2.1.10 - Demo [127.0.0.1]' window. The 'Refresh current object' button is highlighted. A dropdown menu is open, showing the selection 'ST, CF, DC, EX, RP, ...'. A tooltip 'Refresh current object FC' is visible.

Arrows from the text 'Click Refresh Current Object on LD, LN or DO/DA level to read data with selection of FC.' point to the 'Refresh current object' button and the dropdown menu in the screenshots.

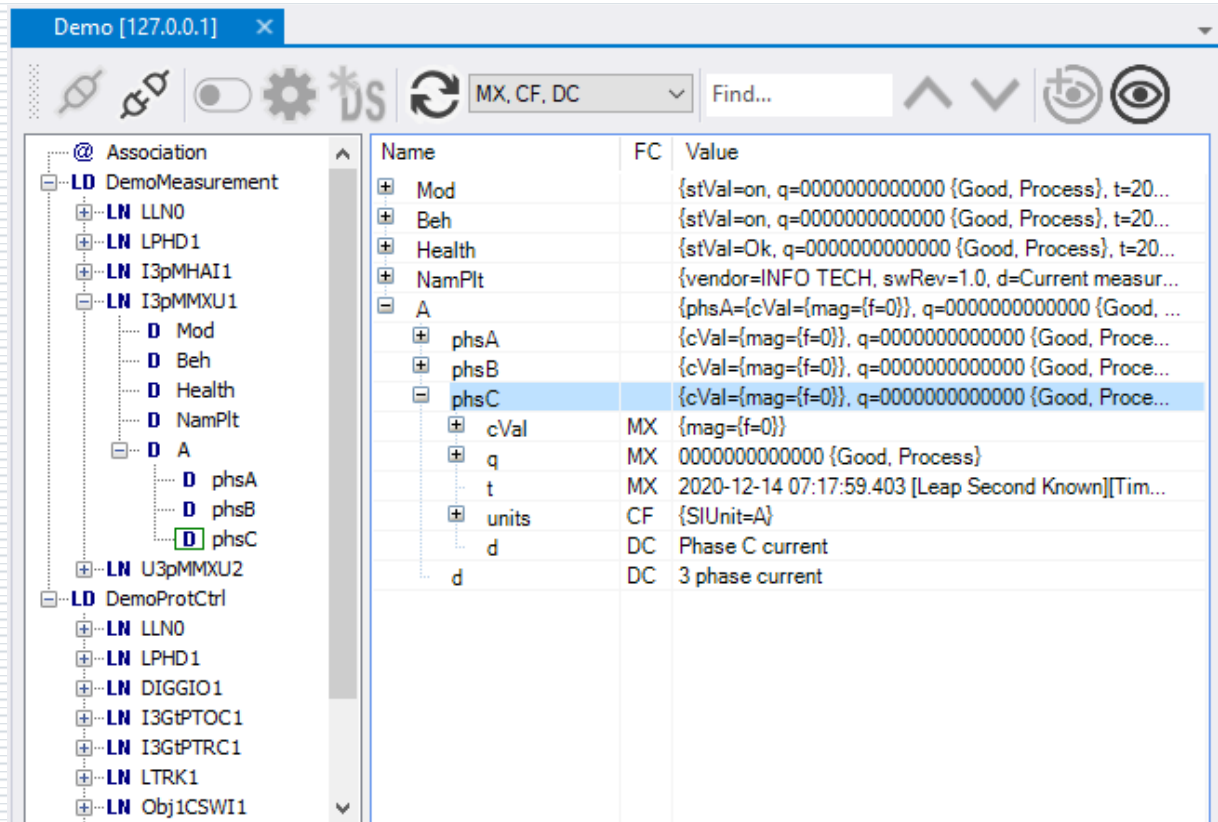

# Data model view

**True data model** as defined in IEC 61850-7.

No confusion with MMS Named Variable space.

The tool can maintain connections to multiple server devices.

# Possible simultaneous connections with multiple servers

In **Main operation view** the tabs of server devices can be arranged as preferred by the tool user.

The screenshot displays the INFO TECH software interface with multiple server connection tabs open. The tabs include 'Demo [127.0.0.1]', 'RegrTestEd2 [192.168.11.158]', and 'Demo [127.0.0.1]'. The 'RegrTestEd2 [192.168.11.158]' tab is active, showing a detailed configuration panel for the 'RegrTestEd2' server. The configuration panel includes sections for 'OSI Parameters', 'Station Configuration', and 'Transport Layer Security'. The 'OSI Parameters' section shows fields for 'Qualifier' (12), 'Presentation ID' (1.1.1.999.1), 'Presentation Select' (00000001), 'Session Select' (0001), and 'Transport Select' (0001). The 'Station Configuration' section shows fields for 'Name' (Demo), 'Indexing' (Default), and 'File Name'. The 'Transport Layer Security' section shows fields for 'TLS' (Disabled) and 'Authentication' (Required). The 'Main operation view' shows a tree structure of server components, including 'Association', 'DemoMeasurement', 'LLNO', 'LPHD1', 'I3pMHAI1', 'I3pMMXU1', 'Mod', 'Beh', 'Health', 'NamPlt', 'A', 'phsA', 'phsB', 'phsC', 'U3pMMXU2', 'DemoProtCtrl', 'LLNO', 'LPHD1', 'DIGGIO1', and 'I3GtPTOC1'. The 'Name' field is set to 'Demo' and the 'Indexing' field is set to 'Default'. The 'File Name' field is set to 'Demo'. The 'Transport Layer Security' section shows 'TLS' as 'Disabled' and 'Authentication' as 'Required'. The 'Main operation view' also shows a table with columns 'Name' and 'FC' and rows for 'Mod', 'Beh', 'Health', and 'NamPlt'. The 'Main operation view' also shows a table with columns 'Sequence Number', 'Data Set', 'Entry Identifier', and 'Data Reference'. The 'Main operation view' also shows a table with columns 'Report ID' and 'Data Reference'.

**Server Configuration Details:**

Parameter	Value
Qualifier	12
Presentation ID	1.1.1.999.1
Presentation Select	00000001
Session Select	0001
Transport Select	0001
Station Configuration Name	Demo
Indexing	Default
File Name	Demo
Transport Layer Security TLS	Disabled
Authentication	Required

**Main operation view Table 1:**

Name	FC
Mod	
Beh	
Health	
NamPlt	

**Main operation view Table 2:**

Sequence Number	Data Set	Entry Identifier	Data Reference

**Main operation view Table 3:**

Report ID	Data Reference

# Reporting function in IEC 61850

Reporting services as defined in IEC 61850-7-2.

Reporting configuration can be invoked from the context menu of a chosen rcb or using the program icon.

The screenshot displays the IEC 61850 configuration software interface. The top toolbar contains icons for various functions, including a gear icon for configuration. The left pane shows a tree view of the configuration hierarchy, with 'Demo [127.0.0.1]' selected. The right pane shows a table of parameters and their values.

Name	FC	Value
RptID	BR	
RptEna	BR	false
DatSet	BR	DemoMeasurement/LLN0.DS1_Measurement
ConfRev	BR	1
OptFlds	BR	0111111111 {sequence-number, report-time-stam...
BufTm	BR	1000
SqNum	BR	0
TrgOps	BR	011111 {data-change, quality-change, data-update...
	BR	0
	BR	false
	BR	false
	BR	0000000000000001
	BR	2020-12-14 07:17:59.655

The context menu is open over the 'Parameters...' option in the tree view, showing options: Report Enable, Parameters..., Purge Buffer, General Interrogation, and Get BRCB Values.

# Configuration of the reporting function

**BR / RP:** dedicated windows for review and modification of reporting parameters of BRCB / URCB.

Incoming reports are displayed in a traceable list.  
A selected report content can be easily viewed.

# List of reports

All incoming reports are collected into a list and presented with the following information:

**#** - report number in the list,

**Report ID** – report identifier,

**Received** – reception timestamp,

**SN** – report sequence number set by the reporting server (other formats in case of segmented reports:

SN.s - where s is a segment number,

SN.sF - where s is a segment number and F indicates the last segment),

**Data Set** – reference name of the dataset used for reporting,

**Details off/on** – show/hide the details of the selected report.

The screenshot displays the 'Tested\_Relay [127.0.0.1]' application. The top section features a toolbar with icons for search, settings, and zoom, along with a 'Default Scope' dropdown and a 'Find...' search bar. Below this, a tree view on the left lists data sets like 'LN LLN0', 'Mod', 'Beh', 'Health', 'NamPit', 'DS1\_Measurement', 'DS2\_All', 'BR brcb01', 'BR brcb02', 'RP urcb01', 'RP urcb02', 'LN LPHD1', 'LN I3pMHAI1', and 'LN I3pMMXU1'. The main area on the right shows a table of report details with columns for Name, FC, and Value. The bottom section contains a 'List of reports' table with columns for #, Report ID, SN, BOvF, and Data Set. An arrow points from this table to a 'Detailed view of selected report' panel on the right, which shows a hierarchical tree of data points and their values.

#	Report ID	SN	BOvF	Data Set
19	DemoMeasurement/LLN0\$BR\$brcb01	25	false	DemoMeasurement/LLN0.DS1_Measureme
20	DemoMeasurement/LLN0\$BR\$brcb02	21	false	DemoMeasurement/LLN0.DS2_All
21	DemoMeasurement/LLN0\$BR\$brcb01	26	false	DemoMeasurement/LLN0.DS1_Measureme
22	DemoMeasurement/LLN0\$BR\$brcb02	22	false	DemoMeasurement/LLN0.DS2_All
23	DemoMeasurement/LLN0\$BR\$brcb01	27	false	DemoMeasurement/LLN0.DS1_Measureme

29	DemoMeasurement/LLN0\$BR\$brcb02	25	false	DemoMeasurement/LLN0.DS2_All
30	DemoProtCtrl/LLN0\$BR\$brcb02	11	false	DemoProtCtrl/LLN0.DS2_Protection

List of reports

Detailed view of  
selected report

# Report detailed content viewing

For each report from the list its detailed content can be examined. The following information is presented:

**Sequence Number** – report sequence number set by the server,

**Data Set** – reference name of the dataset,

**ID** – report identifier,

**Buffer Overflow** – indication of buffer overflow occurrence (for reports from BRCB only),

**Configuration Revision** – version of RCB configuration,

**Time of Entry** – time of report generation (report time stamp – equal to Time of Entry for BRCB),

**Entry Identifier** – report identifier (for reports from BRCB only),

and the **view of reported data** including:

- reference name of reported data (**Data Reference**) with functional constraint (**FC**),
- reason (**Reason Code**) of including data in the report,
- names and values of data components.

# Data model view updates by reports

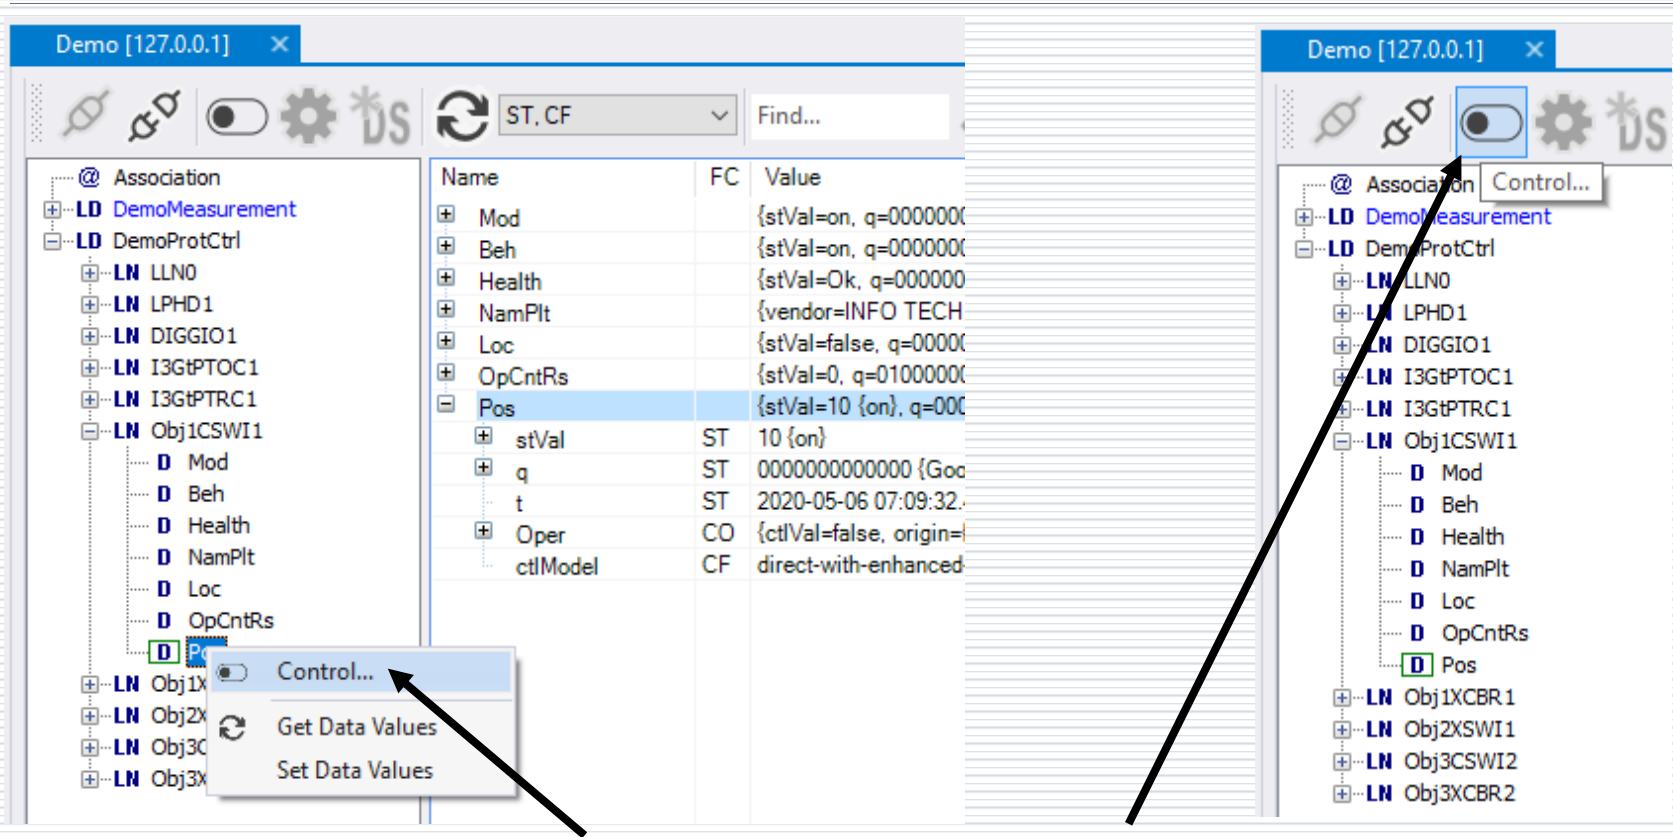

Data values received in reports update also the view of the data model. The name and value of each updated data is emphasized using **blue font**. The same visualization is applied to updates obtained upon read requests.

The screenshot displays the INFO TECH software interface. On the left, a tree view shows the data model structure. The 'Demo [127.0.0.1]' window is active. The tree view shows a hierarchy starting with 'Association', followed by 'LD DemoMeasurement', 'LN LLN0', 'LN LPHD1', 'LN I3pMHAI1', 'LN I3pMMXU1', 'LN U3pMMXU2', 'LD DemoProtCtrl', 'LN LLN0', 'LN LPHD1', 'LN DIGGIO1', 'LN I3GtPTOC1', 'LN I3GtPTRC1', 'LN LTRK1', and 'LN Obj1CSWI1'. The 'Str' node under 'LN I3GtPTOC1' is selected and highlighted in blue.

On the right, a table displays the data for the selected 'Str' node. The table has three columns: Name, FC, and Value. The 'Str' node is expanded, showing its sub-nodes: general, dirGeneral, q, and t. The 'q' and 't' nodes have their values highlighted in blue.

Name	FC	Value
Mod		{stVal=on, q=00000000000000 {Good, Process}, t=2020-12-14 07:17:59.403 [Leap Second Known][Time Accuracy = 10 bits], ctl...

# Control services in IEC 61850

Services as defined in IEC 61850-7-2.

Control services can be invoked in the context menu of the data model or using the program icon.

# Control models and control command parameters

Control command window **CO** shows:

- present status of an object to be controlled,
- parameters of control command,
- buttons for control procedure steps in accordance with assigned control model,
- log of the control procedure performance with client requests, server responses and reports with control results.

# Control commands in test mode

The tool user should be aware of consequences of sending control commands to devices.

When a server device is intentionally switched to TEST or TEST-BLOCKED mode, it is possible to set **Test** flag for control commands and perform control operation as specified for this mode.

# Tracing control commands performance

If the new controlled object position is reported, the status information will be updated in the **CO** window and in the data model view.

Command execution and its result are easy to trace in the log.

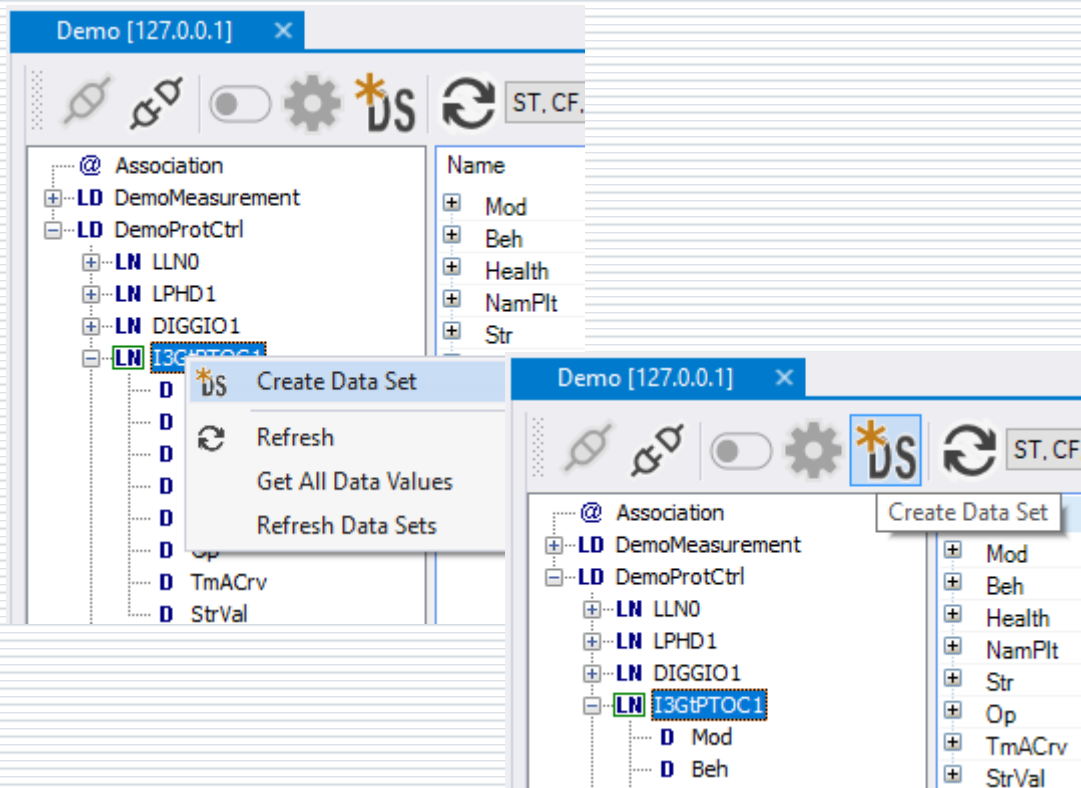

The screenshot shows a software window titled "Demo [127.0.0.1]: DemoProtCtrl/Obj1CSWI1.Pos". It is divided into several sections:

- Status Information:** Contains fields for Value (01 {off}), Control Number, Quality (000000000000 {Good, Process}), and Time Stamp (2018-03-26 13:14:14.016 [Leap Second Known][Time Accuracy = 10 bits]).
- Originator:** Contains fields for Category and Id.
- Control:** Contains a Value dropdown (on (true)), Control Number (0), and a Time section with a Time Stamp (2018-03-26 15:14:21) and a checkbox for "Use Current Time".
- Originator (Control):** Contains a Category dropdown (remote-control), Id (C0A80862), and a HEX dropdown.
- Buttons:** Select With Value, Select, Operate, Cancel, Refresh, and Close.
- Log:** A table showing command execution history.

Time	Service	Message
03:15:35.393	Operate	Request (ctlValue.true)
03:15:35.426	Operate	Response positive
03:15:35.427	Command Tem.	Positive (ctlValue.true)

# Creating dynamic data sets

Persistent – created in LN context

Non-persistent – created in Association context

# Steps of defining a new dataset

Upon invoking **Create Data Set** command a dedicated window pops up to enable dataset definition. The created dataset can be given a name and its elements can be selected from the data model by the command from context menu or by drag-and-drop operation.

The screenshot displays the 'Demo [127.0.0.1]' window with a tree view on the left and a 'Create data set' dialog box on the right. The tree view shows a hierarchy of data elements under 'DemoProtCtrl', including 'Mod', 'Beh', 'Health', 'NamPlt', 'Str', 'general', 'dirGeneral', 'q', 't', and 'Op'. The 'Str' element is selected, and its context menu is open, showing 'Add to Data Set' and 'Get Data Values' options. The 'Add to Data Set' option is highlighted, and a tooltip shows the path 'DemoProtCtrl/I3GtPTOC1.NewDataSet'.

The 'Create data set' dialog box has the following fields and tables:

**Data Set Reference**

Scope: DemoProtCtrl/I3GtPTOC1  
Name: NewDataSet

**Data Set Members**

Name	FC
DemoProtCtrl/I3GtPTOC1.Str	ST
DemoProtCtrl/I3GtPTOC1.Op	ST
DemoProtCtrl/I3GtPTRC1.Tr	ST

At the bottom of the dialog box, there are 'Create' and 'Cancel' buttons. An arrow points to the 'Create' button with the text: 'When the list of elements is complete press **Create** button – a command will be sent to the server device.'

# Activation and edition of Setting Groups

The data model of a server device implementing setting groups includes a Setting Group Control Block object (**SGBC**), placed always in LLN0 logical node.

SGCB attributes:

- NumOfSG – how many setting groups are included in the logical device (LD),
- ActSG – which setting group (number) is currently in use,
- EditSG – which setting group is currently available for editing values.

The screenshot shows the 'Demo [127.0.0.1]' application window. On the left is a tree view of the data model. Under the 'LD DemoProtCtrl' node, the 'LN LLN0' node is expanded, showing various sub-nodes including 'SG SGCB'. On the right is a table displaying the attributes of the selected 'SGCB' object.

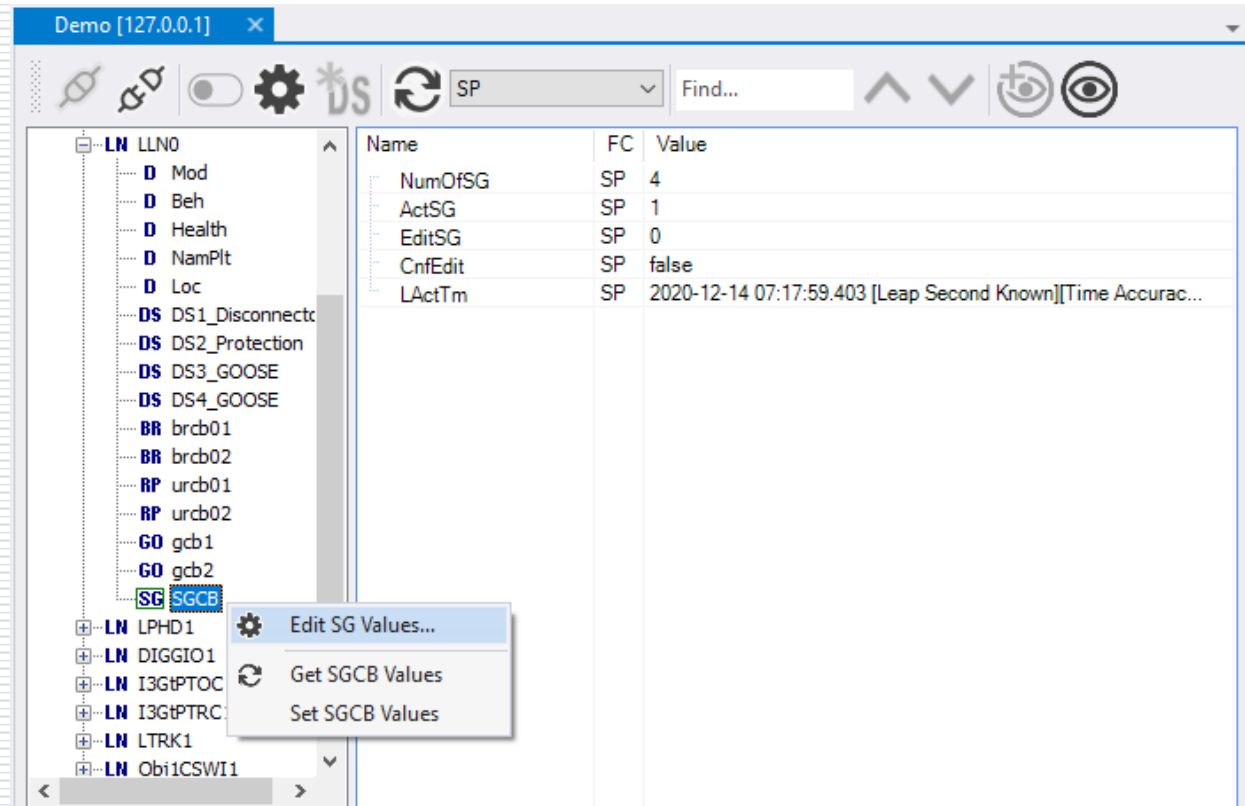

Name	FC	Value
NumOfSG	SP	4
ActSG	SP	1
EditSG	SP	0
CnfEdit	SP	false
LActTm	SP	2020-12-14 07:17:59.403 [Leap Second Known][Time Accuracy = 10 bits]

# Operations on SGCB

SGCB context menu allows to read all attribute values and to write attributes ActSG, EditSG, CnfSG, ResvTms. A new value should be set in **Value** field of the attribute and confirmed with a proper command.

But a more user-friendly option to configure SGCB and edit settings is to invoke **Edit SG Values** command.

# Setting Group Control window

Upon invoking **EditSGValues** command a dedicated **Setting Group Control** window pops up to enable all operations on SGCB as well as editing of values of the selected setting group.

# Change of the active setting group

Selection of an active setting group is made from the drop-down list with assigned numbers of all groups implemented in the device.

After changing the active setting group the device should set a new value of **Last Activation Time**.

Setting values from the active group are presented in the list below (**Active** column informs that these are the attributes of FC=SG) – there is no need to search this information in the data model.

# Change of setting values in the group selected for editing

Setting values from the group selected for editing are presented in the list below (**Edit Buffer** column shows attributes of FC=SE) – there is no need to search this information in the data model.

For settings of enum type a new value can be selected from a drop-down list.

New values are checked for being accepted by the server device.

The screenshot shows a window titled "Setting Group Control: DemoProtCtrl/LLN0.SGCB". It contains several input fields and buttons. Below these is a table with three columns: "Setting Name", "Active Buffer", and "Edit Buffer". The first row of the table has "I3GtPTOC1.TmACrv.setCharact" in the first column, "Multiline 2" in the second, and a dropdown menu in the third. An arrow points from the text "For settings of enum type a new value can be selected from a drop-down list." to this dropdown menu. The dropdown menu is open, showing a list of options: "Multiline 1", "Long-Time Extremely", "Long-Time Very Inver", "Long-Time Inverse", "IEC Normal Inverse", "IEC Very Inverse", "IEC Inverse", "IEC Extremely Inverse", and "IEC Short-Time Invers".

Setting Name	Active Buffer	Edit Buffer
I3GtPTOC1.TmACrv.setCharact	Multiline 2	Multiline 1
I3GtPTOC1.StrVal.setMag.f	25	Long-Time Extremely
		Long-Time Very Inver
		Long-Time Inverse
		IEC Normal Inverse
		IEC Very Inverse
		IEC Inverse
		IEC Extremely Inverse
		IEC Short-Time Invers

# Confirmation of new setting values from the edited group

Newly introduced setting values are temporarily memorized in the server device (if correct), but their assignment to the group selected for editing must be still confirmed by pressing the command button **Confirm Editing**. Only after that the edited setting group will acquire the new values.

# Log view

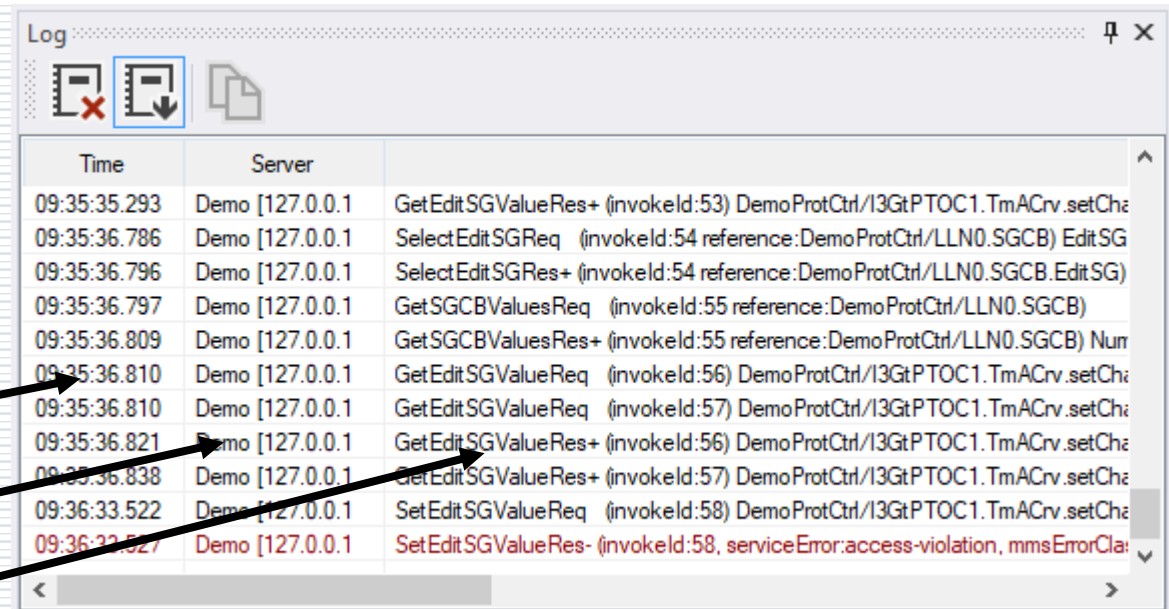

The tool provides a chronological view of operations (commands, responses and events) occurring during the interactions with server devices.

Each message in the log is described by:

**Time** – timestamp of the occurrence,

**Server** – device concerned,

**Message** – description of the operation.

# Finding objects

The search function allows users to enter any string of characters, and then search for matching objects in the data model. The function will highlight all objects in the model with names containing the search text.

The user can start searching for objects using the keyboard shortcut **Ctrl + F**.

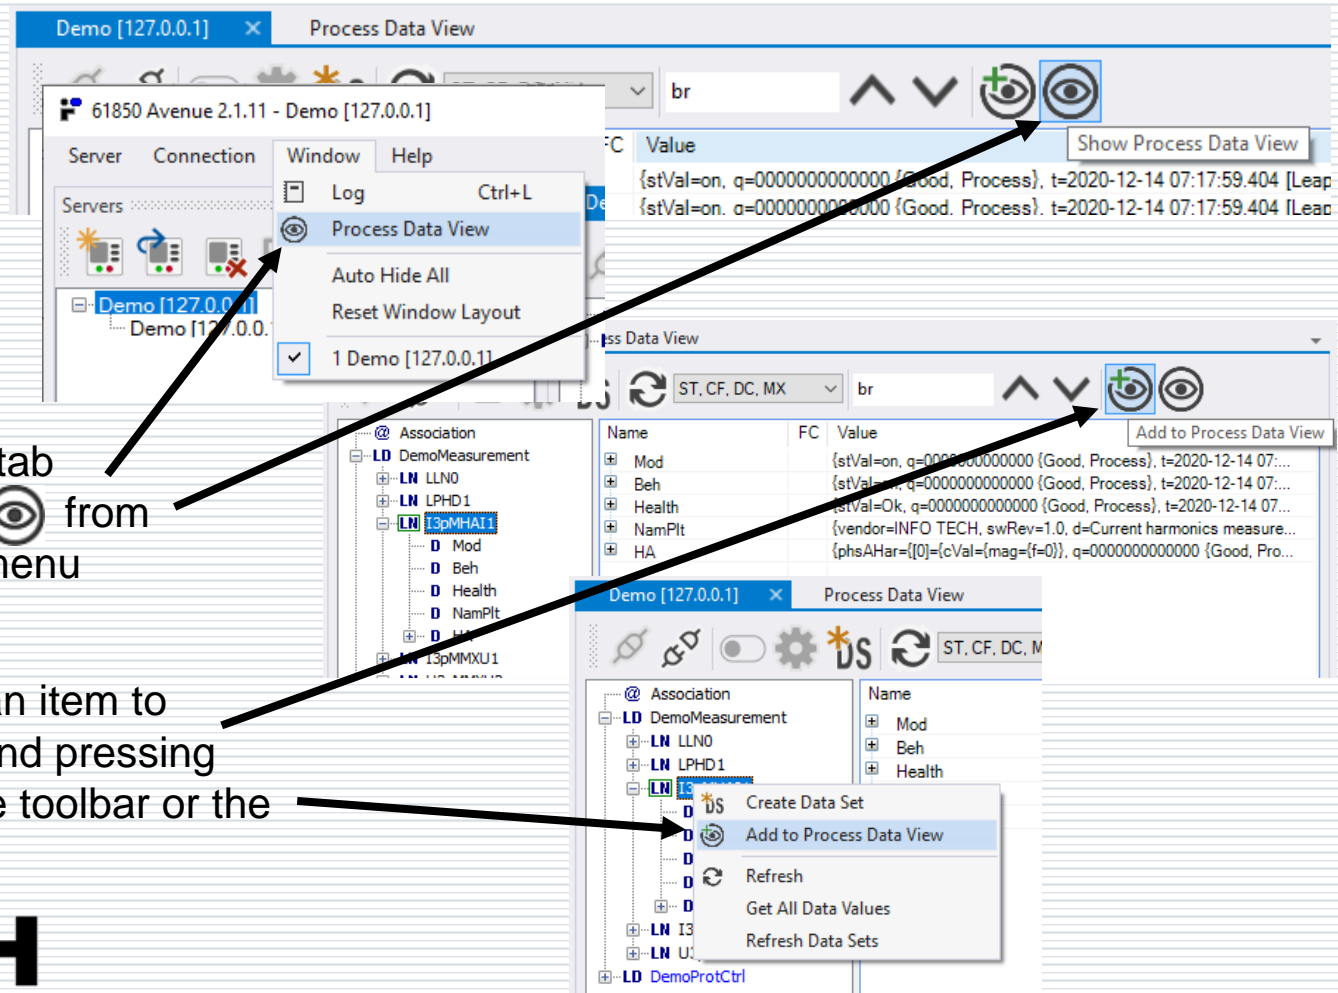

# Process Data View - adding objects

Process Data View (PDV) is a common view to monitor selected items from different IEDs.

PDV is a separate tab opened by button  from the toolbar or the menu *Window*

The user can add an item to PDV by selecting and pressing button  from the toolbar or the context menu.

# Process Data View (PDV) - toolbar

PDV toolbar is composed of the following elements:

Confirming update of all items by button 

Removing item(s) from PDV by button 

Refreshing selected items by button 

Copying selection by button 

Data polling settings

The user can configure PDV presentation scope (right click on the table header) by showing / hiding columns of specific data attributes.

The PDV items highlighted with blue font are the ones that have been refreshed but not yet viewed by the user. cycle. After viewing by the user, the refreshed item is set back to the default black font.

# Generation of ICD/CID file

Possible for a selected server device with explored data model. By invoking **Export to SCL file...** command.

The user can adjust the produced SCL file in the dialog of parameter selection.

# What else can be found in 61850 Avenue toolset ...

IEC 61850 Relay Simulator

GOOSE testing toolset

Sampled Values testing toolset

File transfer testing toolset

IEC 61850 ICD Editor

# 61850 Relay Simulator

Feeder bay model with circuit breaker and disconnecter.

Simple overcurrent protection relay with IEC61850 server interface (representative classes of LNs, fixed data model).

An excellent tool to help comprehending how a protection relay is seen in the IEC 61850 communication network.

Very easy to use for testing operations of the IEC 61850 client end.

# IEC 61850 Relay: Setup in the start view - edition

Standard edition to be applied can be selected by the user (1, 2 or 2.1).

Other connection parameters:

- Optional RCB attributes can be included.
- Service tracking configuration can be added.
- OSI addresses can be optionally checked.
- MMS communication on port 102 or optionally secure communication using TLS on port 3782 and optionally ACSE authentication.

Connection on the selected interface or on all interfaces can be accepted.

Select server parameters

IED name: Demo

Edition: 2Amd1: IEC 61850-7-4:2007B

☒ ResvTms in RCB

☐ Owner in RCB

Service tracking configuration

DpcTrk	Not assigned
UrbTrk	Not assigned
BrCbTrk	Not assigned
GocbTrk	Not assigned
SgcbTrk	Not assigned

Root path:

Interface: VMware Network Adapter VMnet8 MAC: 00:50:56:C0:00:C

☒ MMS server on all available interfaces Port: 102

VMware Virtual Ethernet Adapter for VMnet8  
IP: 192.168.72.1  
IP6: FE80:0000:0000:0000:0A28:19D9:AB4E:F2B5

☐ Check OSI addresses

☐ Use TLS

☐ Use ACSE authentication

# IEC 61850 Relay: Setup in the start view – TLS & ACSE

When using TLS and ACSE:

- the port number must be set to 3782,
- the certificate and private key of the server must be provided,
- the certificate of Certificate Authority, Certificate Revocation List and the certificate of the client must be provided,
- optionally, the allowed IP addresses of the client can be defined.

The screenshot shows a configuration window for the IEC 61850 Relay. At the top, there is a checkbox labeled "MMS server on all available interfaces" which is checked. To its right is a "Port" field containing the value "3782". Below this, a text box displays network information: "VMware Virtual Ethernet Adapter for VMnet8", "IP: 192.168.72.1", and "IP6: FE80:0000:0000:0000:0A28:19D9:AB4E:F2B5". Further down, there are three checkboxes: "Check OSI addresses" (unchecked), "Use TLS" (checked), and "Use ACSE authentication" (checked). Below these are two sections for cybersecurity configuration. The "Server cybersecurity configuration" section has fields for "Certificate" and "Private key", each with a folder icon and a radio button. The "Client cybersecurity configuration" section has fields for "CA file", "CRL file", and "Certificate", each with a folder icon and a radio button. There is also a large text area for "Allowed IPs" with a green plus icon and a radio button. At the bottom, there are "OK" and "Cancel" buttons.

# IEC 61850 Relay: Outgoing feeder bay simulator

Feeder bay model with circuit breaker and disconnector.

Simple overcurrent protection relay with IEC61850 server interface (representative classes of LNs, fixed data model).

Local and remote monitoring.

Local and remote control (DO-es control model) with hardwired interlocking.

Additional line with circuit breaker for demonstration of an alternative control model (SBO-es).

Simulation of CB motor failure.

Client of time server.

# IEC 61850 Relay: options for Ed.1, Ed.2 and Ed.2.1

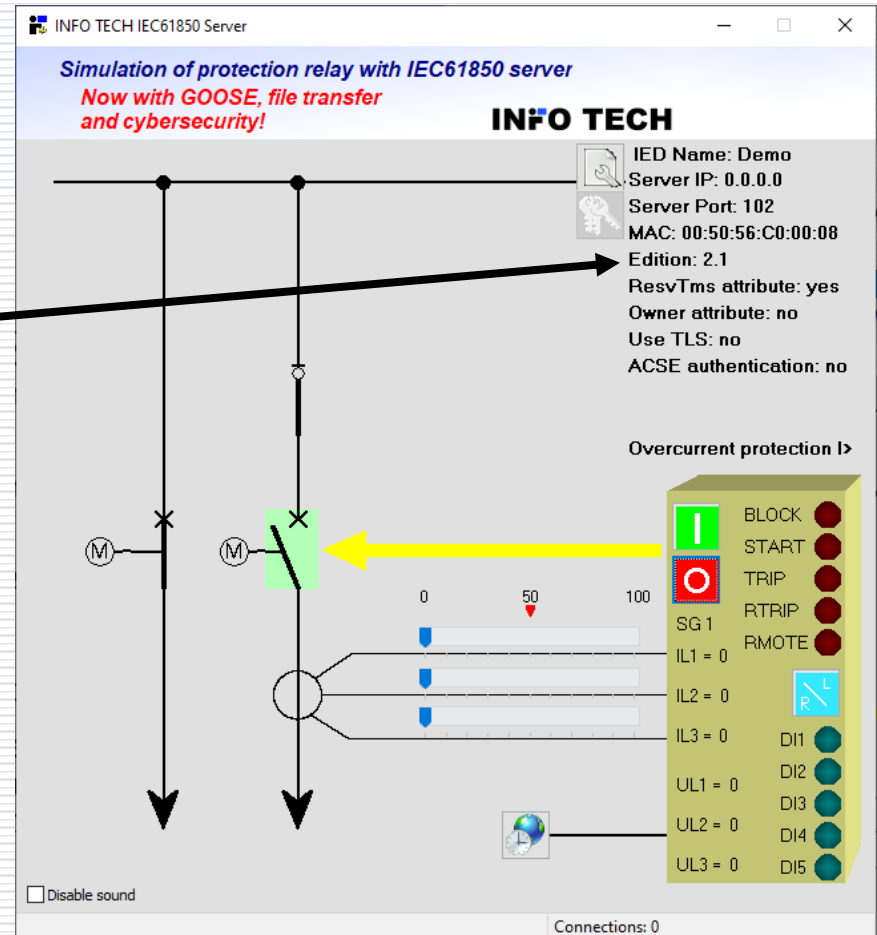

Three options of the simulator program execution are available:

- Conformant with IEC 61850 Ed.1
- Conformant with IEC 61850 Ed.2
- Conformant with IEC 61850 Ed.2.1

(with different ICD files).

Note:

Remember that on the same PC you can run only one instance of the simulator program at a time.

# IEC 61850 Relay: simulation of analog signals

Current level can be driven for each phase (manually or by formula, e.g. time dependent) – menu on its scroll bar.

Possibility to simulate harmonic distortion – click on signal name.

Overcurrent protection with inverse time characteristics.

The screenshot displays the INFO TECH IEC61850 Server software interface. The main window title is "INFO TECH IEC61850 Server". Below the title bar, there is a blue banner with the text "Simulation of protection relay with IEC61850 server" and "Now with GOOSE, file transfer and cybersecurity!". The interface is divided into several sections:

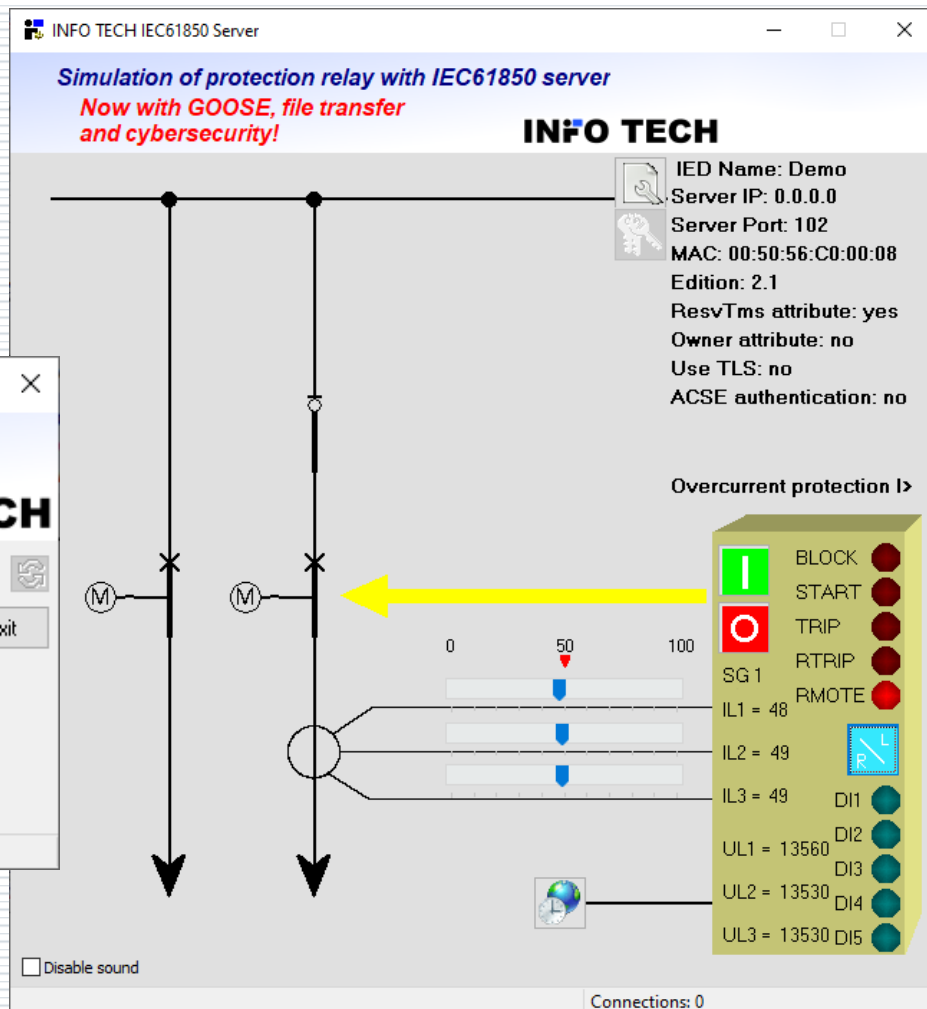

- Top Right Panel:** Contains server information: IED Name: Demo, Server IP: 0.0.0.0, Server Port: 102, MAC: 00:50:56:C0:00:08, Edition: 2.1, ResvTms attribute: yes, Owner attribute: no, Use TLS: no, ACSE authentication: no.
- Left Panel:** A "Harmonics for IL1" section with a bar chart showing harmonic levels for DC, 1st, 2nd, 3rd, 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, and 15th harmonics. The 1st harmonic is set to 100%, while others are at 0%.
- Center Panel:** A diagram showing a power system with a motor (M) and a relay. A yellow arrow points from the "Edit automatic formula" dialog box to the relay, and a black arrow points from the "Overcurrent protection" panel to the relay.
- Right Panel:** A "Overcurrent protection" panel with a scroll bar. It contains a list of protection functions: BLOCK, START, TRIP, RTRIP, RMOTE, and a list of current levels: IL1 = 48, IL2 = 49, IL3 = 49, UL1 = 13560, UL2 = 13530, UL3 = 13530. There are also status indicators for DI1 through DI5.
- Bottom Panel:** A "Disable sound" checkbox and a "Connections: 0" status indicator.

The "Edit automatic formula" dialog box is open, showing the formula "IL1 = 49". The "Overcurrent protection" panel is also open, showing the current levels and status indicators.

# IEC 61850 Relay: GOOSE communication

GOOSE Publisher function (in a separate program): publishing status changes.

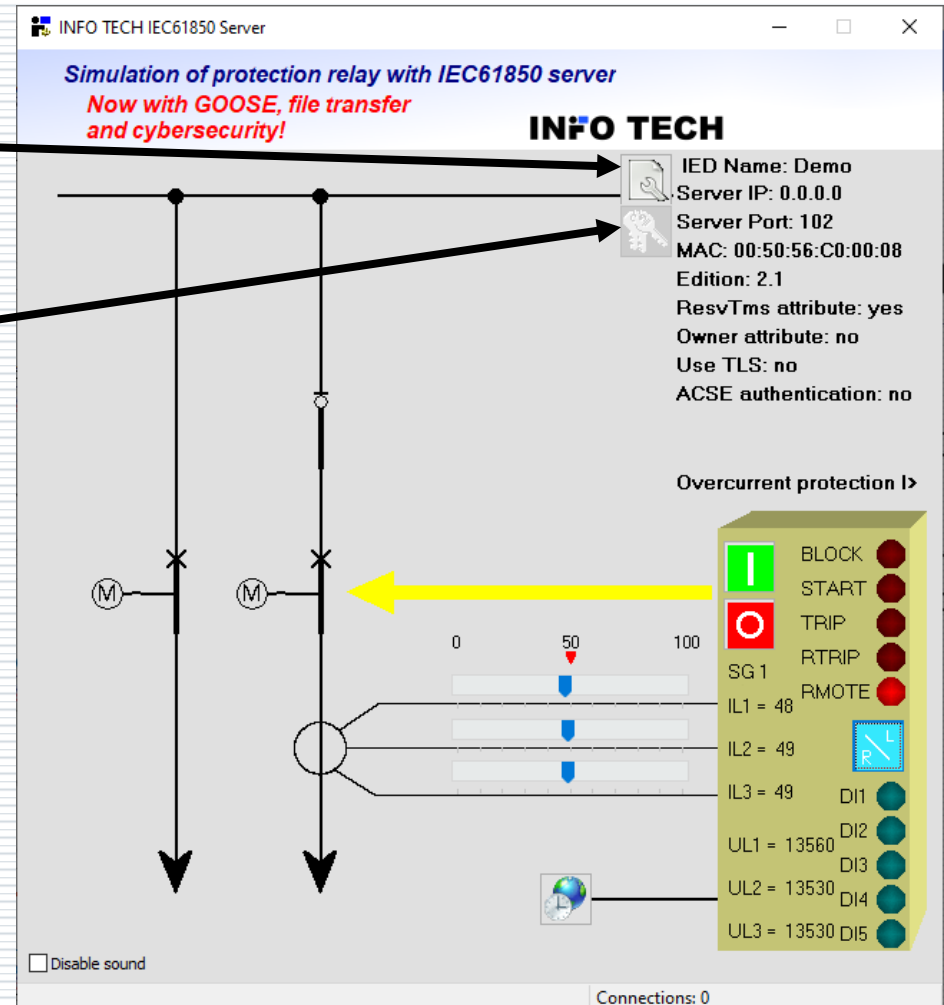

GOOSE Subscriber function: enables **remote tripping** and **remote protection blocking** from another application.

# IEC 61850 Relay: Export of configuration files

Export of ICD file.

If TLS and/or ACSE used:  
Export of secrets (file with  
certificates and keys)

# GOOSE Toolset

---

# GOOSE toolset: GOOSE Sender – configurable publisher

The program operating as GOOSE Publisher with configurable transmission parameters of GOOSE messages, including the possibility of creating a dataset with data values driven manually by the user or by calculation formulas.

Press **GO** button to start publishing and **STOP** button to terminate.

Note: The program by default sets the GOOSE message **Simulation** bit (Ed.2) / **Test** bit (Ed.1) to TRUE to avoid unwanted consequences of transmitting GOOSE messages. It is the user's responsibility to change this bit value.

Idx	Type	Value	Formula	Data reference
0	BOOL	FALSE		
1	STRUCT	5 element(s)		
1.0	BOOL	FALSE		
1.1	QUALITY	00000000000000		
1.2	TIME	2023-03-08 08:18:49.749		
2	INT	0		

Remember to select the correct Ethernet adapter from the list of **Network adapter** parameter.

# GOOSE Sender – data values defined by formulas

if	Conditional result: if argument 1 evaluates to true (is not 0) result is equal to argument 2 otherwise result is equal to argument 3
intpower	IntPower raises argument 1 to the power specified by argument 2 (both arguments are treated as integers)
ln	Natural logarithm ( $\ln(e) = 1$ ) of the argument
log10	Logarithm of base 10 of the argument
logN	Logarithm base N of X
max	Maximum of 2 arguments
min	Minimum of 2 arguments
pi	The ratio of a circle's circumference to its diameter. Pi is approximated as 3.1415926535897932385
pow	Power raises argument 1 (base) to power given by argument 2 (exponent). For fractional exponents or exponents greater than 2147483647, base must be greater than 0
radtodeg	Converts angles measured in radians to degrees
randG	Produces random numbers with Gaussian distribution parametrized by argument 2 (standard deviation) about the argument 1 (mean).
random	Produces random number within the range $0 \leq X < 1$
round	Rounds a real-type value to an integer-type value
sin	Sine of the argument
sinh	Hyperbolic sine of the argument
sqr	Square of the argument
sqrt	Square root of the argument
tan	Tangent of X
tanh	Hyperbolic tangent of X
trunc	Truncates a real-type value to an integer-type value (value of X rounded toward zero)

Symbol Explanation	
!	Factorial i.e. $5!$ gives $1*2*3*4*5 = 120$
%	Percentage i.e. 10% gives 0.1
-	Negate i.e. -10 gives -10 and --10 gives 10
+	Positive value i.e. +10 gives 10
^	Power i.e. $3^2$ gives 9
*	Multiplication i.e. $2*2$ gives 4
/	Division i.e. $4/2$ gives 2
div	Integer division (result and operands are treated as integers)
mod	Remainder i.e. $3 \bmod 2$ gives 1 (result and operands are treated as integers)
+	Sum i.e. $2+2$ gives 4
-	Subtract i.e. $4-2$ gives 2
-	Subtract i.e. $4-2$ gives 2
-	Subtract i.e. $4-2$ gives 2
<	Less than i.e. $3 < 2$ gives 0 (false)
<=	Less than or equal to i.e. $1 \leq 2$ gives 1 (true)
>=	Greater than or equal to i.e. $4 \geq 2$ gives 1 (true)
>	Greater than i.e. $4 > 2$ gives 1 (true)
=	Equal to i.e. $4 = 2$ gives 0 (false)
<>	Not equal to i.e. $4 \neq 2$ gives 1 (true)
not	Logical negation i.e. not 0 gives 1 and not 1 gives 0
or	Bitwise or i.e. 1 or 4 gives 5
and	Bitwise and i.e. 3 and 6 gives 2
xor	Bitwise xor i.e. 7 xor 5 gives 2

When defining formulas for calculating data values and their changes it is possible to use various operators, functions and variable T representing time counter (in seconds) from the publisher function start, e.g.:

T mod 2	- sequence false, true, false ... (1 s interval)
$30 + 10 * \sin(2 * T)$	- sin wave with average value 30
if(T mod 2, 10, -10)	- square wave -10,10,-10 ...

# GOOSE Sender – configuration based on imported SCL file

It is possible to configure GOOSE Publisher function by the definition of GoCB object included in the imported SCL file. Transmission parameters and the dataset will be configured as specified in the chosen control block of the selected device.

The screenshot displays the GOOSE Sender application window. The 'Import' menu is highlighted, and an arrow points to the 'Available GOOSE streams' table. The 'GOOSE' configuration panel on the right shows settings for Edition 1, App ID 2, Fixed FALSE, DSRRef LLN0\$DS4, CBRRef LLN0\$gcb1, GID G2, and Time 2023-03-08 08:02:55.610. The 'Data items' table at the bottom lists two streams, both with 'Not routable' type and 'Demo' IED. The 'Dataset elements' panel on the right lists five elements for the selected stream.

Idx	IED	Type	Destination Address	App ID	Conf Rev	GOOSE ID	GCB Reference
1	Demo	Not routable	01-0C-CD-01-00-00	0001	1	G1	DemoProtCtrl/LLN0\$GO\$gcb1
2	Demo	Not routable	01-0C-CD-01-00-01	0002	1	G2	DemoProtCtrl/LLN0\$GO\$gcb2

Idx	Type	Value	Formula	Data reference
1	Not routable	01-0C-CD-01-00-00		
2	Not routable	01-0C-CD-01-00-01		

Dataset elements:

- DemoProtCtrl/DIGGIO1.Ind1.stVal [ST]
- DemoProtCtrl/DIGGIO1.Ind2.stVal [ST]
- DemoProtCtrl/DIGGIO1.Ind3.stVal [ST]
- DemoProtCtrl/DIGGIO1.Ind4.stVal [ST]
- DemoProtCtrl/DIGGIO1.Ind5.stVal [ST]

# GOOSE Sender – simulation of another device

In this way the program can simulate the transmission performed by another device. It allows to test how GOOSE messages will be received and processed by devices with GOOSE Subscriber function.

In case of such a configuration the dataset description table will also include Data reference information with names of dataset elements.

The screenshot shows the 'GOOSE Sender' application window. The 'Type' is set to 'Ethernet'. The 'Source' MAC address is '0A:00:27:00:00:09' and the 'Destination' is '01:0C:CD:01:00:01'. The 'VLAN' section is checked, with 'Priority' set to 4, 'CFI' set to 'Eth', and 'ID' set to 0. The 'IP' section shows 'Address' as '239.1.1.35' and 'Class of traffic' as 32. The 'GOOSE' section includes 'Edition' 1, 'App ID' 2, 'Fixed' FALSE, 'DSRef' 'DemoProtCtrl/LLN0\$DS4\_GOOSE', 'CBRef' 'DemoProtCtrl/LLN0\$GO1gob2', 'GID' 'G2', and 'Time' '2023-03-08 08:02:55.610'. On the right, 'TTL' is 4000, 'StNum' is 1, 'SqNum' is 113, 'CigRev' is 1, 'NComm' is FALSE, and 'Test' is TRUE. Below these settings is a 'Data items' table.

Idx	Type	Value	Formula	Data reference
0	BOOL	FALSE		DemoProtCtrl/DIGGIO1.lnd1.stVal [ST]
1	BOOL	FALSE		DemoProtCtrl/DIGGIO1.lnd2.stVal [ST]
2	BOOL	FALSE		DemoProtCtrl/DIGGIO1.lnd3.stVal [ST]
3	BOOL	FALSE		DemoProtCtrl/DIGGIO1.lnd4.stVal [ST]
4	BOOL	FALSE		DemoProtCtrl/DIGGIO1.lnd5.stVal [ST]

# GOOSE Sender – dataset elements of both simple and structured types

The created or imported configuration of GOOSE Publisher function may include dataset containing elements of simple or structured types – both options are supported.

The screenshot displays the GOOSE Sender application window. The top menu bar includes File, Edit, Transmission, and Help. Below the menu is a toolbar with icons for file operations, status (GO, STOP), and network settings. The 'Network adapter' is set to 'Ethernet 5 MAC: 0A-00-27-00-00-09'.

The main configuration area is divided into two sections: 'Type' and 'GOOSE'.

**Type Section:**

- Type: Not routable
- Ethernet: Source (0A:00:27:00:00:09, Own), Destination (01:0C:CD:01:00:20, M-cast)
- VLAN: ☒ VLAN header, Priority (4), CFI (Eth), ID (0, H)
- IP: Address (239.1.1.35, M-cast), Class of traffic (32)

**GOOSE Section:**

- Edition: 1
- App ID: 20, H
- Fixed: FALSE
- DSRef: EM20TCPLD0/LLN0\$DS3\_Goose
- CBRef: EM20TCPLD0/LLN0\$G0\$gcb1
- GID: EM20
- Time: 2023-03-08 08:02:55.610
- TTL: 4000
- StNum: 1
- SqNum: 113
- CigRev: 20
- NComm: FALSE
- Test: TRUE

**Data items Table:**

Idx	Type	Value	Formula	Data reference

# GOOSE Receiver – monitoring the selected message stream

The selected GOOSE message stream can be monitored to test the performance of transmitting device (e.g. detect data changes, interruptions of transmissions, etc.).

Viewing message streams present in the networks allows also to recognize configuration errors, e.g. the same APPID or GOOSE ID values set to different publishers.

Idx	Type	Value	Data reference
0	BOOL	FALSE	DemoProtCtrl/DIGGIO1.Ind1.stVal [ST]
1	INT	0	DemoProtCtrl/DIGGIO1.Ind2.stVal [ST]
2	FLOAT	1.65699994	DemoProtCtrl/DIGGIO1.Ind3.stVal [ST]
3	BOOL	FALSE	DemoProtCtrl/DIGGIO1.Ind4.stVal [ST]
4	BOOL	FALSE	DemoProtCtrl/DIGGIO1.Ind5.stVal [ST]

A sequence of received GOOSE messages can be traced in the invoked **Parser** window.

# GOOSE Receiver – detecting errors in configuration of message streams

The view of GOOSE message streams indicates conflicts in the system configuration:

**Error:** streams of different publishers have the same parameter values of Destination MAC, App ID and GOOSE ID

**Warning:** streams of different publishers have the same parameter values of Destination MAC and App ID.

[illegible]

Streams with conflicts are marked with colored background:

**Red** – error, **Dark red** – error and conflict with the stream selected for monitoring, **Yellow** – warning, **Dark yellow** – warning and conflict with the stream selected for monitoring, No color – no conflict.

# GOOSE Receiver – configuration from imported SCL file

GOOSE Subscriber function can be also configured by the definition of GoCB object included in the imported SCL file. In this way it is possible to test message transmissions from each of the publishers present in the described system.

The screenshot displays the 'GOOSE Receiver' application window. The 'Import' menu is open, showing options for 'File', 'Transmission', 'Data', and 'Help'. The 'Network adapter' is set to 'Ethernet MAC: 98-29-A6-87-39-76'. The 'GOOSE' configuration section includes fields for App ID (2), TTL (4000), DSRef (DemoProtCtrl/LLN0\$DS4\_GOOSE), CBRef (DemoProtCtrl/LLN0\$GO\$gcb2), GID (G2), and Time (2020-06-05 12:26:52.849). The 'Ethernet' section shows Source (98:29:A6:87:39:76) and Destination (01:0C:CD:01:00:01) MAC addresses, with a 'VLAN' section containing a checked 'VLAN header' and a 'Priority' of 4. The 'IP' section shows an Address of 239.1.1.35. Below the configuration, a table titled 'Available GOOSE streams' lists two streams: '1 Demo Not routable 01-0C... 0001 1 G1 DemoProtCtrl/LLN0\$GO\$gcb1' and '2 Demo Not routable 01-0C... 0002 1 G2 DemoProtCtrl/LLN0\$GO\$gcb2'. A 'Data reference' section on the right lists dataset elements for each stream. The 'Use' button is highlighted at the bottom left, and the 'Close' button is at the bottom right.

Idx	IED	Type	Dest...	App ID	Con...	GOOSE ID	GCB Reference
1	Demo	Not routable	01-0C...	0001	1	G1	DemoProtCtrl/LLN0\$GO\$gcb1

  - NComm: FALSE
  - Test: TRUE
  - Status:

Below the configuration area is a **Data items** table:

Idx	Type	Value	Data reference
0	BOOL	FALSE	
1	INT	0	
2	FLOAT	1.6569999945	
3	BOOL	FALSE	
4	BOOL	FALSE	

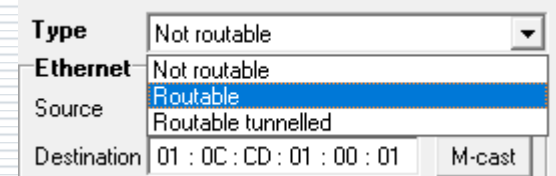

# GOOSE Sender and GOOSE Receiver support also routable messages

The **Type** of packet to be sent or to be received can be configured:

**Not routable** – GOOSE message as Ethernet frame

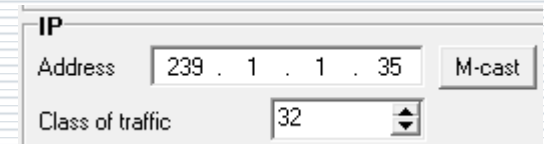

**Routable** – sent over IP between IEDs, data part of GOOSE frame routed using IP packets and UDP protocol, locally forwarded by receiving IED as Ethernet GOOSE frame

**Routable tunneled** – sent between routers of two subsystems, GOOSE frame routed using IP packets and UDP protocol, locally forwarded by router as Ethernet GOOSE frame

The screenshot shows a configuration window with the following fields:

Type	Not routable
Ethernet	Not routable
Source	Routable
Destination	01 : 0C : CD : 01 : 00 : 01
	M-cast

The screenshot shows a configuration window with the following fields:

IP	
Address	239 . 1 . 1 . 35
	M-cast
Class of traffic	32

For routable GOOSE the multicast destination IP address and class of traffic must be also configured.

# Routable GOOSE: differences between types of routing

---

By using routable GOOSE (R-GOOSE) it is possible to transfer critical messages between different LANs of a wide area automation system.

An IP packet with **routable tunneled R-GOOSE** message contains an original destination MAC address and VLAN header – this information is then retained by the receiving router when forwarding R-GOOSE message as Ethernet GOOSE message to the local network.

An IP packet with **routable R-GOOSE** message comes without its original destination MAC address and VLAN header. This information will be set by the receiving router based on the internal setup before forwarding R-GOOSE message as Ethernet GOOSE message to the local network.

# Sampled Values Toolset

---

# SV toolset: SAV Sender – working area

Sender working area shows properties of the currently sent Sampled Values stream. This area is divided into several groups:

**Ethernet header** showing source and destination MAC address of the message

**VLAN header** showing VLAN part of the message (if present)

**Sampled Values header** used to set Sampled Values header part of the message

**Signal sampling properties** showing all options of the sampling rate and ASDU packing in accordance with the IEC 61869-9

**Signal quality bits** allowing to set quality bits for each sampled signal

**Signal values** allowing to set amplitude and phase of each simulated signal

The screenshot shows the 'Sampled Values Sender' application window. It features a menu bar (File, Transmission, Help), a toolbar with icons for file operations and status, and a network adapter selection dropdown set to 'Ethernet MAC: 98-29-A6-87-39-76'. The main configuration area is divided into several sections:

- Type:** Set to 'Routable'.
- Ethernet:** Source MAC '98 : 29 : A6 : 87 : 39 : 76' (Own), Destination MAC '01 : 0C : CD : 04 : 00 : 00' (M-cast).
- VLAN:** 'VLAN header' is checked. Priority is 4, CFI is 'Eth', and ID is 0.
- IP:** Address '239 . 1 . 1 . 35' (M-cast), Class of traffic is 32.
- Sampled Values Header:** App ID is 4000, Simulation is 'TRUE', Config Rev is 1, and SvID is 'INFOTECHMU01'.
- Signal values:** Frequency is 50.00 Hz, Nominal frequency is 50 Hz. It lists signals I1, I2, I3, Io, U1, U2, U3, and Uo with their respective Amplitude [A] or [V] and Phase [deg] settings.
- Signal sampling:** Variant is 'F4000S1', Samples/Cycle is 80, and Synchronized is 'No'. A note specifies 'F4000S114U4 For use on 50Hz system backward compatible with 9-2LE guideline: 4000Hz sampling rate, 1 ASDU per frame'.
- Signal quality:** A table with columns for quality bits (I1, I2, I3, Io, U1, U2, U3, Uo) and rows for various quality indicators like 'Invalid/Good', 'Questionable', 'Overflow', etc.

Annotations with arrows point from the text on the left to the corresponding sections in the software interface:

- From 'Ethernet header' to the Ethernet MAC address fields.
- From 'VLAN header' to the VLAN header checkbox and fields.
- From 'Sampled Values header' to the Sampled Values Header section.
- From 'Signal sampling properties' to the Signal sampling section.
- From 'Signal quality bits' to the Signal quality table.
- From 'Signal values' to the Signal values section.

# SV toolset: SAV Sender - simulator of Merging Unit

## Configurable publisher of message stream with sampled values – Merging Unit simulator.

Define characteristics of sampled signals (amplitude, phase, frequency) manually or using calculation formulas. Simulate quality problems for the transmitted sampled values, if required.

Press **GO** button to start publishing and **STOP** button to terminate.

# SV toolset: SAV Sender

## - configuration from files

The transmission parameters of a Merging Unit to be simulated can be configured using an imported SCL file with the defined MSVCB object.

The sampled signals waveforms can be configured using a recording from an imported COMTRADE.

In this case it is necessary to assign channels from the COMTRADE file to the signals transmitted by SAV Sender.

# SV toolset: SAV Sender – COMTRADE channels selection

This window allows to select signals from an imported COMTRADE file and assign them to channels defined in the IEC 61850-9-2LE specification. Io and Uo signals can be artificially calculated from phase signals if needed (in such a case the DERIVED bit in quality attribute will be set for those signals). Not assigned channels will have values 0 and INVALID quality bit set.

It is possible to view selected signals by pressing **Preview** button. If the selection is acceptable, press **OK** button. Then invoke **Play COMTRADE** command from Transmission menu and the SAV stream will be sent to the network.

Signal	Channel in COMTRADE file
I1	IL1: L1 Current (A) [A]
I2	IL2: L2 Current (B) [A]
I3	IL3: L3 Current (C) [A]
Io	Not assigned
U1	UL1: L1 Voltage (A) [V]
U2	UL2: L2 Voltage (B) [V]
U3	UL3: L3 Voltage (C) [V]
Uo	Not assigned

☐ Calculate (next to Io)

☐ Calculate (next to Uo)

OK Preview Cancel

# SV toolset: SAV Sender – COMTRADE recording preview

**Preview** button from channels selection window allows visualize selected signals from the imported COMTRADE file.

Shortcuts available in the viewer's toolbox are shown below

**Original width** - command rescales plot to fit horizontally complete waveform

**Original height** - command rescales plot to fit vertically complete waveform

**Magnify horizontally** - command magnifies plot horizontally

**Magnify vertically** - command magnifies plot vertically

**Go to trigger** - command moves plot to make trigger point visible on the screen

**Move left** - command moves plot one step left

**Move right** - command moves plot one step right

**Close** - command closes viewer window

# SV toolset: SAV Receiver - signal processing from received samples

Configurable sampled values subscriber: reception parameters can be set manually or defined using the selected SV message stream from the list of streams detected in the network.

# SV toolset: SAV Receiver – computation of signal characteristics

Signal characteristics are computed in real-time based on the incoming sampled values message stream.

The computation may (optionally) apply resampling in case of detecting a deviation of the actual signal frequency from the nominal signal frequency specific for power systems.

# SV toolset: SAV Receiver - tracing SV message stream

SV messages are displayed in Parser window.

The screenshot displays the SAV Receiver application interface. The main window is titled "Sampled Values Receiver" and includes a menu bar with File, Transmission, Data, and Help. The "Data" menu is open, showing options for Parser window and Recorder. The "Parser window" is a separate window showing a list of SV messages. The "Communication status" section shows the status as "No data" and the number of lost messages as 14440. The "Sampled Values Quality" section shows a table of quality indicators for various channels. The "Measured frequency [Hz]" is 0.00, and the "Resample to measured frequency" checkbox is checked. The "Harmonics view" section shows a circular plot of harmonics.

# SAV Receiver – detecting errors in configuration of message stream

The view of SAV Receiver message streams indicates conflicts in the system configuration:

Stream viewer can also detect possible conflicts in process bus network. Application is using following rule to mark streams:

**Error** state: two streams with different source MAC and the same Destination MAC, App ID and SV ID

**Warning** state: two streams with different source MAC and the same Destination MAC and App ID

Available SAV streams

Idx	Type	Source MAC	Destination MAC	IP	App ID	Config Rev	SV ID	Mess...	Simul...
1	Not r...	98:29:A6:87:39:76	01:0C:CD:04:00:00	N/A	4000	1	INFOTECHMU01	112482	FALSE
2	Not r...	98:29:A6:87:39:78	01:0C:CD:04:00:00	N/A	4001	1	INFOTECHMU01	99310	FALSE
3	Not r...	98:29:A6:87:39:79	01:0C:CD:04:00:00	N/A	4001	1	INFOTECHMU01	9459	FALSE
4	Not r...	98:29:A6:87:39:79	01:0C:CD:04:00:00	N/A	4001	1	INFOTECHMU012	32183	FALSE

Subscribe Clear Close

Streams with conflicts are marked with colored background:

**Red** – error, **Yellow** – warning, No color – no conflict, **Lime** - conflict warning with selected stream, **Aqua** - conflict error with selected stream

# SAV Receiver – importing streams definitions from SCL

Definitions of data sent over the network can be imported from standard SCL files. The program can use System Configuration Description files (SCD files) describing the whole substation system or files of selected IEDs like for example Configured IED Description (CID file). Selecting an appropriate stream and clicking at **Use** button will start reception of the stream according to its parameters defined in SCL file.

[illegible]

# SAV Receiver – recording samples in COMTRADE file

Received sequence of sampled values can be also recorded and saved in a COMTRADE format file (manual trigger or determined by condition formula).

The screenshot displays the SAV Receiver software interface, which is used for recording and analyzing sampled values. The interface is divided into several panels:

- Recorder Panel:** This panel allows users to configure recording parameters. It includes fields for Duration [ms] (set to 1000), Pretrigger time [%] (set to 50), and a Trigger condition field. Below these fields is a table showing the status of eight recording slots. Slot #1 is 'Done' with a timestamp of 05.06.2020 16:50:26. Slots #2 through #8 are 'Empty'. Each slot has a 'Save', 'Clear', and 'View' button. A 'Manual trigger' button and a 'Clear all' button are also present.
- Sampled Values Receiver Panel:** This panel shows the network adapter configuration (Ethernet MAC: 98-29-A6-87-39-76) and the communication status (Status: OFF line, Lost messages: 1461760). It also displays a table of sampled values quality, which includes columns for I1, I2, I3, Io, U1, U2, U3, and Uo. The table shows various quality indicators such as Invalid/Good, Questionable, Overflow, Out of Range, Bad Reference, Oscillatory, Failure, Old Data, Inconsistent, Inaccurate, Substituted/Process, Test, Operator Blocked, and Derived.
- Sampled Values Quality Panel:** This panel provides a detailed view of the sampled values quality. It includes a table with columns for I1, I2, I3, Io, U1, U2, U3, and Uo. The table shows various quality indicators such as Invalid/Good, Questionable, Overflow, Out of Range, Bad Reference, Oscillatory, Failure, Old Data, Inconsistent, Inaccurate, Substituted/Process, Test, Operator Blocked, and Derived.
- Harmonics view Panel:** This panel displays the measured frequency [Hz] (50.00) and a checkbox for 'Resample to measured frequency'. It also shows a table of measured values (I1, I2, I3, Io) and a polar plot of the measured values. The table shows: I1 Mag:77.00, Ang:-86.00; I2 Mag:86.00, Ang:120.00; I3 Mag:0.00, Ang:162.00; Io Mag:63.00, Ang:126.00. The polar plot shows the magnitude and angle of these values.

# SV toolset: SAV Receiver

## – viewing recorded COMTRADE file

**View** button in **Recorder** window allows to examine the waveforms of the signals received and recorded.

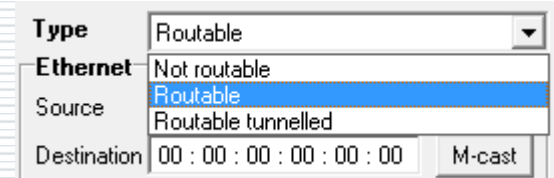

# SAV Sender and SAV Receiver support also routable messages

The **Type** of packet to be sent or to be received can be configured:

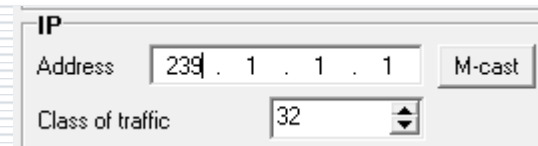

**Not routable** – SV message as Ethernet frame

**Routable** – sent over IP between IEDs, data part of SV frame routed using IP packets and UDP protocol, locally forwarded by receiving IED as Ethernet SV frame

**Routable tunneled** – sent between routers of two subsystems, SV frame routed using IP packets and UDP protocol, locally forwarded by router as Ethernet SV frame

A screenshot of a configuration window for packet types. It contains four rows: 'Type' with a dropdown menu set to 'Routable'; 'Ethernet' with a dropdown menu showing 'Not routable', 'Routable' (highlighted in blue), and 'Routable tunneled'; 'Source' with a dropdown menu set to 'Routable tunneled'; and 'Destination' with a text field containing '00 : 00 : 00 : 00 : 00 : 00' and an 'M-cast' button.

A screenshot of an 'IP' configuration window. It has two rows: 'Address' with a text field containing '239 . 1 . 1 . 1' and an 'M-cast' button; and 'Class of traffic' with a dropdown menu set to '32'.

For routable GOOSE the multicast destination IP address and class of traffic must be also configured.

# File Transfer Tool

---

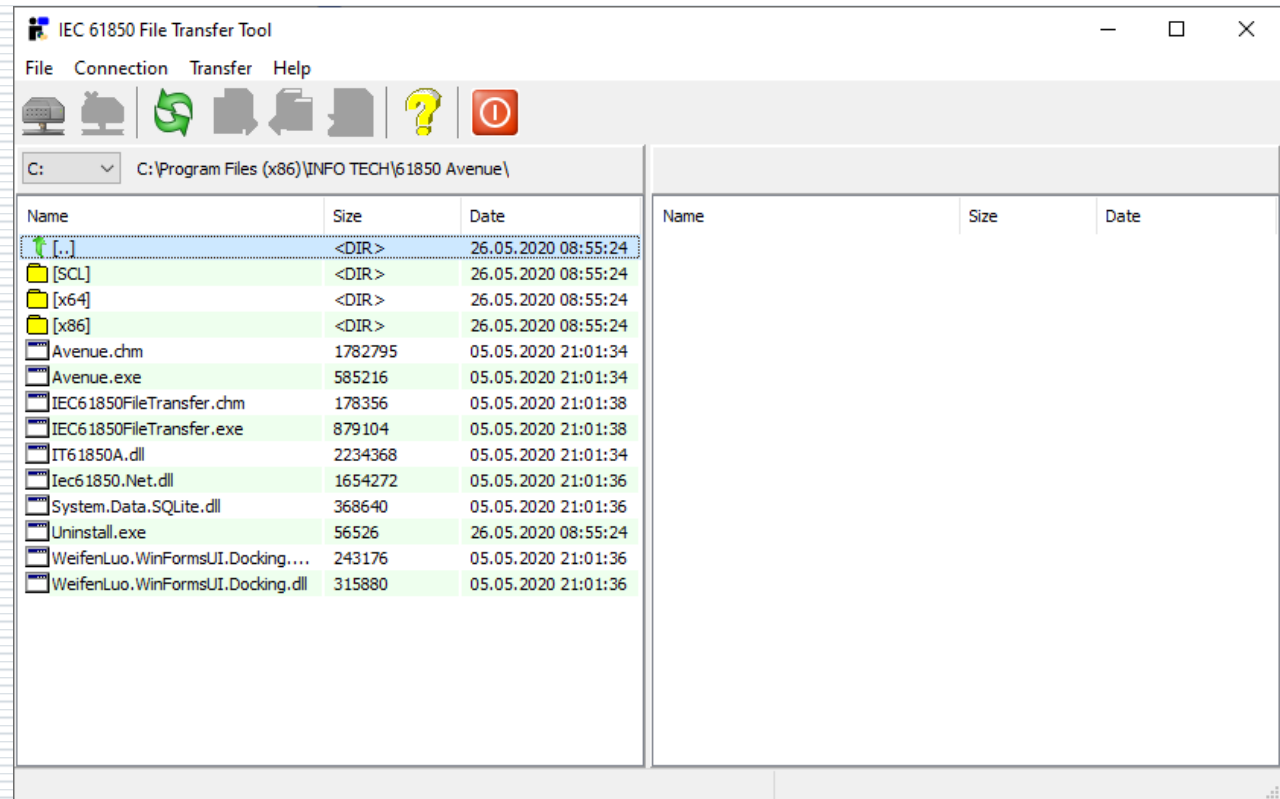

# File Transfer Tool – to test access to files in server devices

Initial view:

Left side: selected directory of the file system on PC.

Right side: file system of the server device.

The program operated as MMS protocol client using file services.

# File Transfer Tool – connection to server device as a file server

From **Connection** menu select **Connect** command.

Next, enter an IP address of the server device to connect to.

Port number 102 is default for MMS which is used for file transfer.

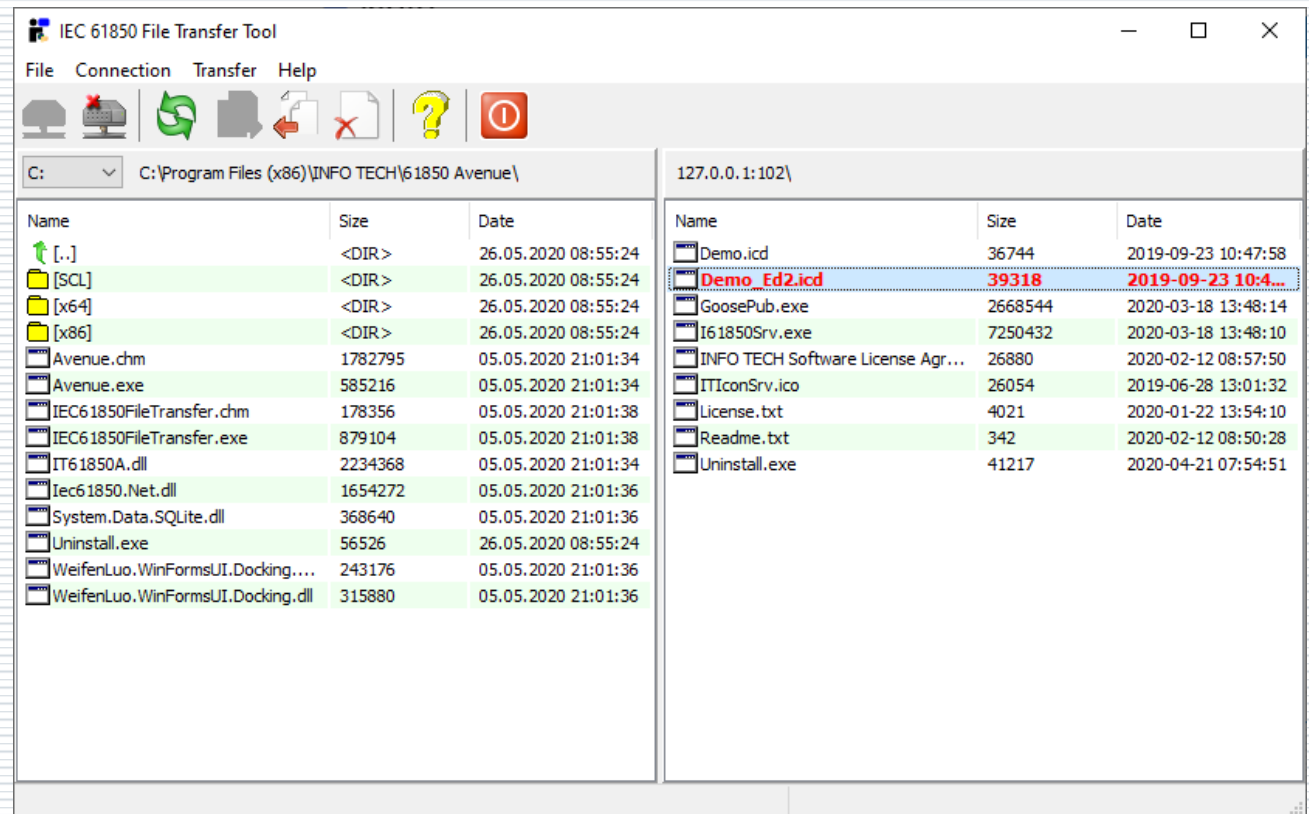

# File Transfer Tool – view of the file system in the server device

Note:

IEC 61850 Edition 1 allows server devices to present their file system as hierarchical with subdirectories.

IEC 61850 Edition 2 requires server devices to present a flat file system (as specified in MMS protocol) and then the names of subdirectories (e.g. COMTRADE) shall be a part of the file name – as shown here.

# File Transfer Tool – file transfer operations

The set of supported operations is determined when establishing connection with the server device.

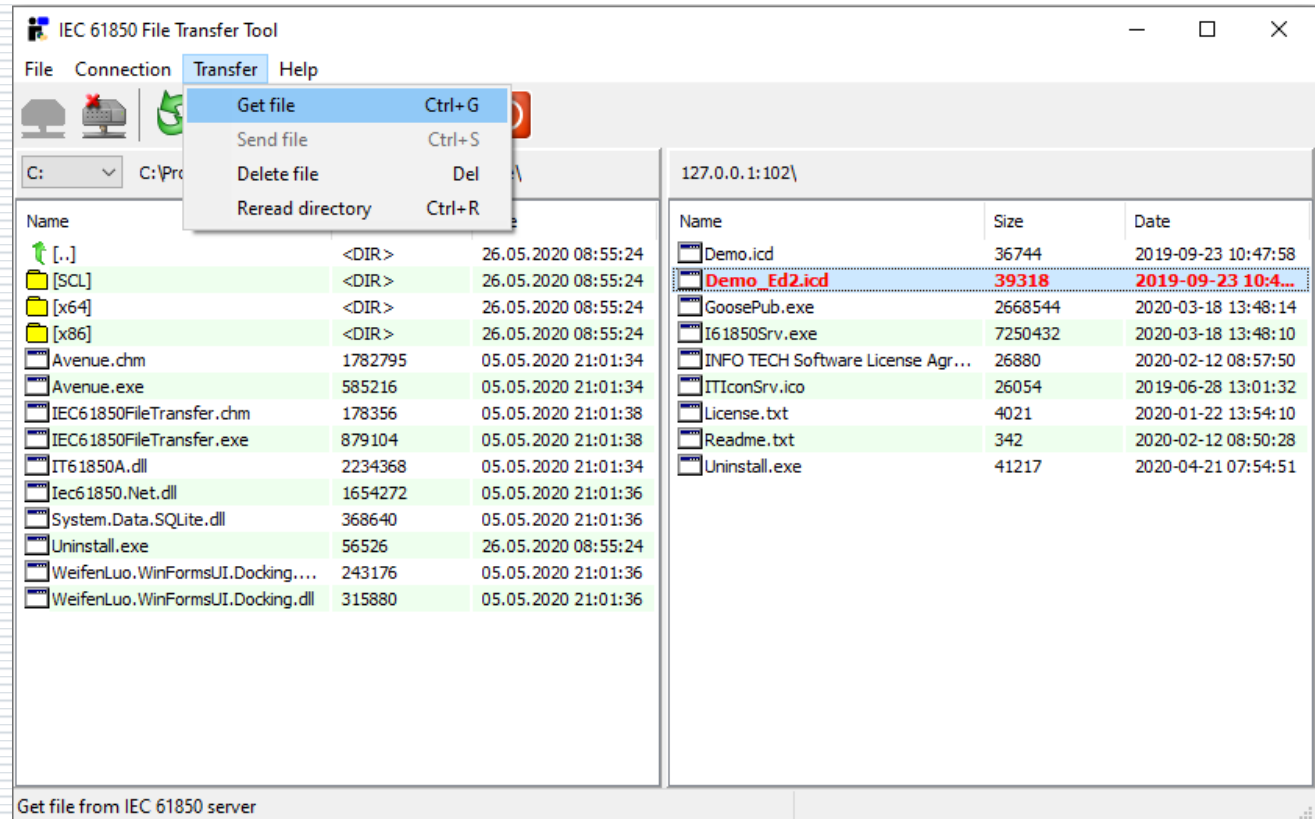

Possible operations in **Transfer** menu:

**Get file** – file reading from the server

**Send file** – file writing to the server

**Delete file** – file removal

**Reread directory** – refresh of the file list

# 61850 ICD Editor

A tool to create and modify SCL files.

# 61850 ICD Editor allows to build an ICD file of the server device

The screenshot displays the 61850 ICD Editor software interface with several windows open:

- 61850 ICD Editor - Untitled**: The main window with a menu bar (File, Edit, View, Help) and a toolbar. The left sidebar shows a tree structure under 'TEMPLATE' with nodes like 'LD LDO', 'LN LLNO', 'DO Beh', 'DA stVal [ST]', 'DA q [ST]', 'DA t [ST]', 'LN LPHD1', 'DO PhyNam', 'DA vendor', 'DO PhyHealth', and 'DA stVal [ST]'.
- Create new Logical Device**: A dialog box with fields for 'Name' (LDO), 'Type' (IEC 61850-7-4), and 'Logical Device' (IEC 61850-7-410). It has 'OK' and 'Cancel' buttons.
- Add new Logical Node**: A dialog box with a 'Class' dropdown (XCBR), 'LN name' dropdown (TVBR, TVTR, TWPH), and a list of 'This LN is example' (XSXWI, YEFNC, YLTC, YPSH). It has 'OK' and 'Cancel' buttons.
- Control Block Editor**: A dialog box with 'Control block type' dropdown (Unbuffered Report CB), 'Name' (Unbuffered Report CB), 'DataSet' dropdown, 'Report ID' field, 'Buffering time' (1000), 'Integrity period' (0), 'Config revision' (1), and 'Instances' (1). It has 'OK' and 'Cancel' buttons.
- Create new IED**: A dialog box with 'IEC 61850 version' (Edition 2 Amd.1), 'IED name' (Edition 2), 'Manufacturer', 'Type', and 'Description' fields. It has 'OK' and 'Cancel' buttons.

Text overlays on the image indicate the workflow:

- Add LD**: Points to the 'Create new Logical Device' dialog.
- Add LN with selection of optional DO and DA**: Points to the 'Add new Logical Node' dialog.
- Add RCB, GCB, SGCB, SVCB with attributes settings**: Points to the 'Control Block Editor' dialog.

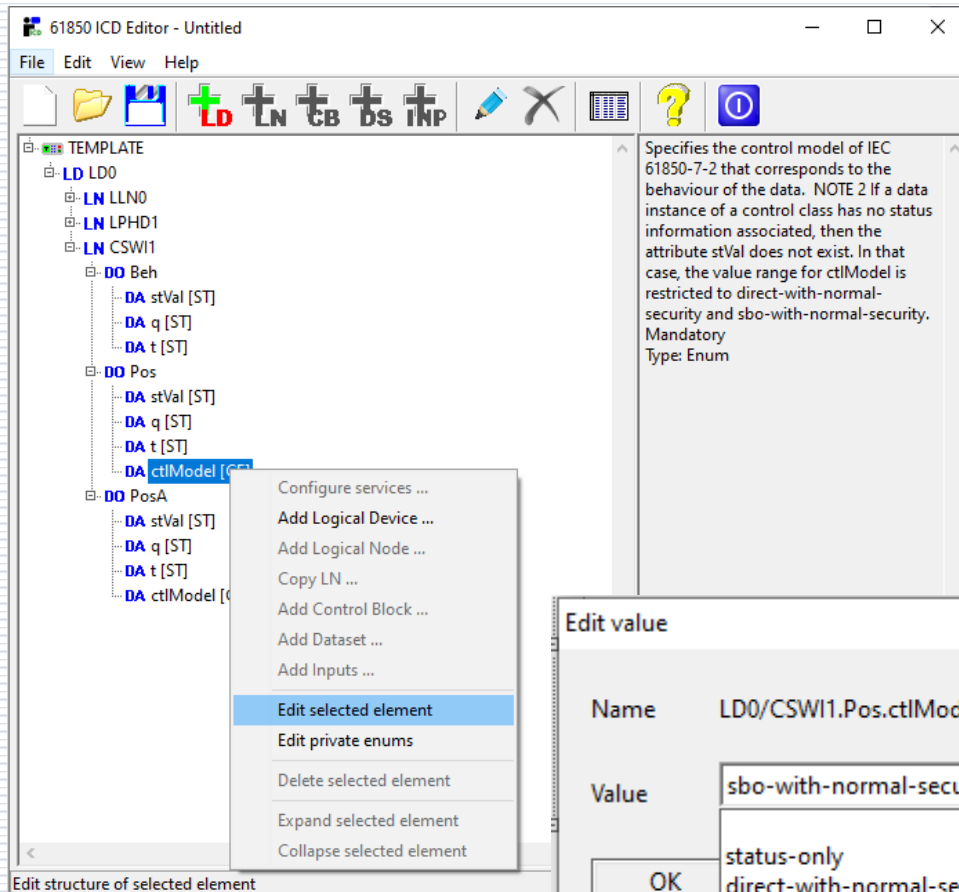

From scratch (new IED, new LD, new LN) or by modification of an existing file.

# 61850 ICD Editor - editing data model

Any added LN can be later modified by adding/deleting optional DOs and DAs.

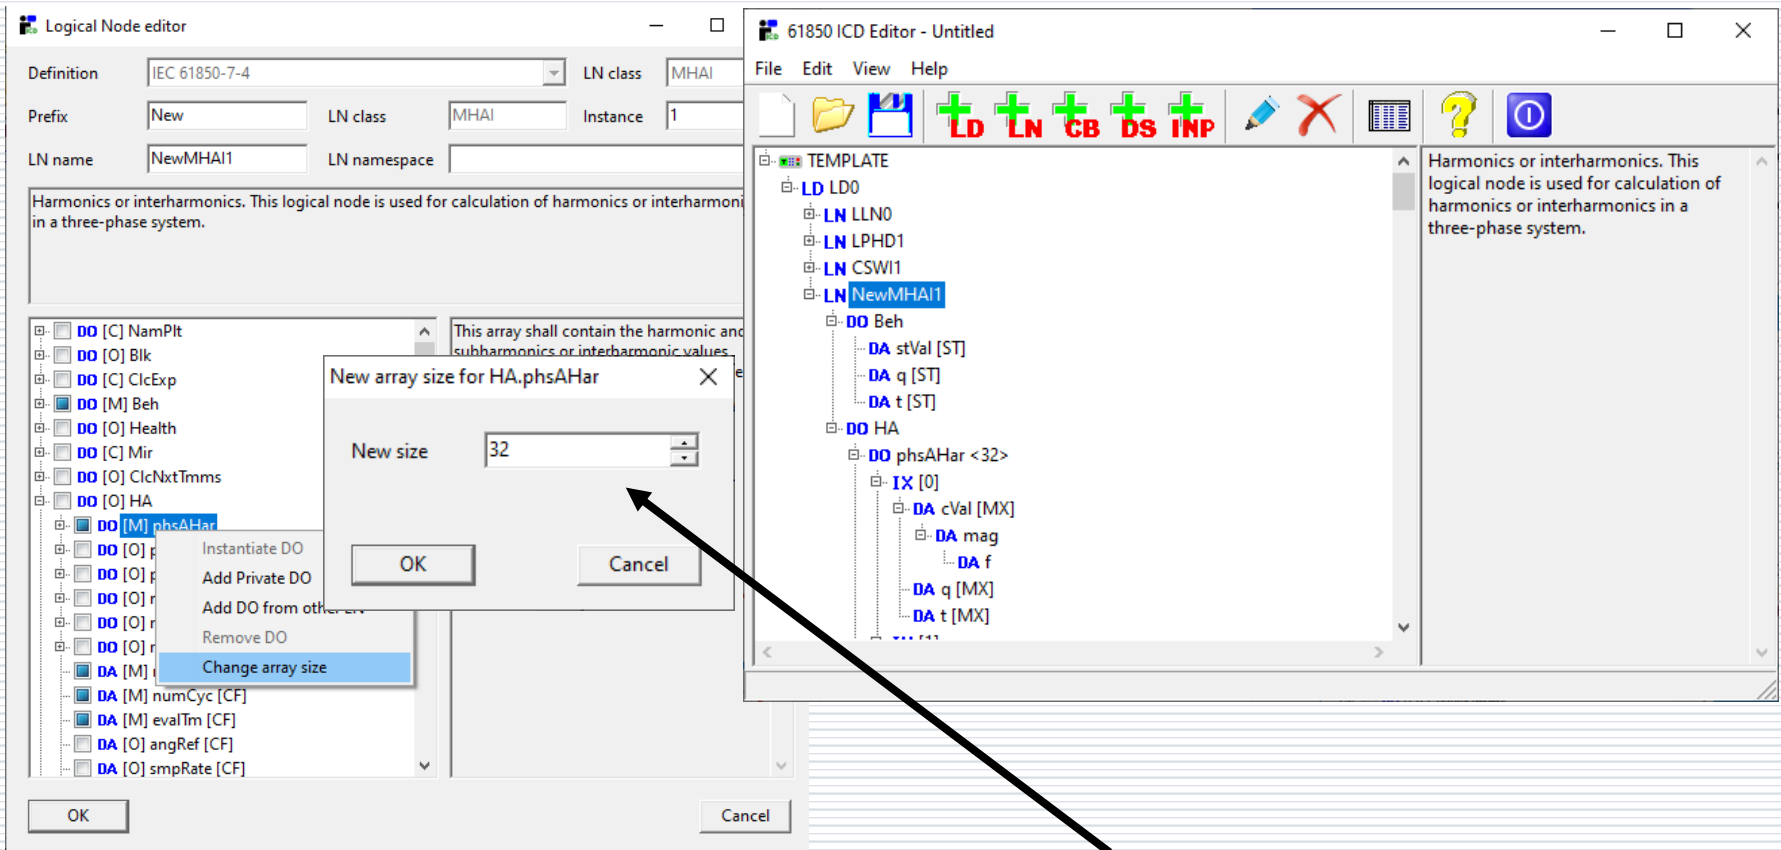

# 61850 ICD Editor - presetting DA values

Data attribute values can be preset if needed. Standard defined enums are supported.

# 61850 ICD Editor - LNs with DOs containing array types

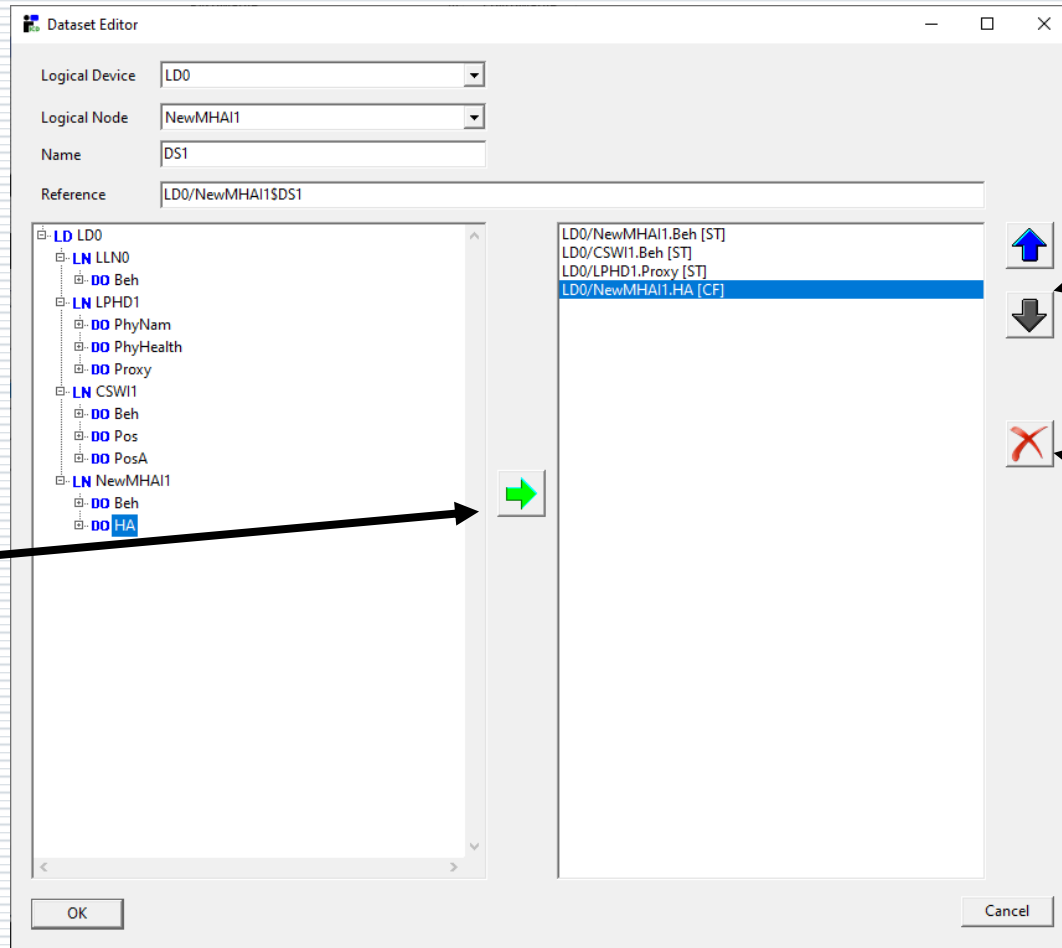

Array size can be set (default is 32).

# 61850 ICD Editor - Dataset creation by selection of elements from the data model

Any defined dataset can be later re-edited if needed.

Button for adding a selected element of data model to dataset.

Note that in Ed.2.1 also indexed data can be elements of datasets.

Buttons for changing order of elements in dataset.

Button for removing element of dataset.

# 61850 ICD Editor - control blocks

URCB, BRCB, GoCB, USVCB, MSVCB and SGCB can be added to the data model and initially preset.

Any defined control block can be later re-edited if needed.

# 61850 ICD Editor - private Logical Nodes

button for  
manual  
editing.

# Possible applications of 61850 ICD Editor program

---

- ❑ Creation and modification of ICD/CID file for the device under configuration.
- ❑ Processing of an ICD file into a CID file (addresses, datasets, parameters of control blocks).
- ❑ Creation and modification of ICD/CID file to be used for server device simulation (e.g. with the use of INFO TECH 61850 SCL Runner tool).
- ❑ Modification of ICD/CID file for the IEC 61850 client program (e.g. 61850 Avenue client), for example to enable execution of negative test cases on the server device.
